Questions Collected

Question	Who Asked the Question?	Response Provided (By Whom)
Beneficiaries are yet to receive third tranche although their files were sent to the district 3 months ago. Why is their delay in distributing the tranches to beneficiaries?	Ward chairperson	We have speed up the tranche delivery process. We had some issues with staffing. We are managing the staffing and try to manage and expedite the tranche payment work. (GMALI)
Beneficiaries are dissatisfied with the grievance result. What mechanism has been setup to address this?	Beneficiaries	They can apply for seeking an answer to their queries and NRA/GMALI will give an explanation. If not satisfied they can reapply. GMALI is planning to start taking written applications from beneficiaries very soon.

Challenges and Way Forward

Challenge	Way Forward
Beneficiaries are dissatisfied with the grievance result. What mechanism has been setup to address this?	They can submit their dissatisfaction in a written form to district GMALI/NRA. NRA/GMALI will give answer to them.
How can beneficiaries access second installment of retrofitting grant? What mechanism has been set up for it?	The beneficiaries can consult with the engineer's based in the field for retrofitting measures to be implemented. Then after completion of measures recommended by engineer, the technical team will inspect the house and recommend it to DLPIU housing. The DLPIU housing will then look into the file and if found correct will forward it to GMALI for processing the payment.

Case Study

Reconstruction of Low Cost House

It's a story of 42 years Bhakta Bir Gurung who is a permanent residence of Dharche Gaun Palika -5, Gumda. He is staying with his wife in a small house. Like other houses in Gumda village, his old house collapsed in gorkha earthquake 2072. He decided to build the new house in the same foundation of old one, as he has personnel attachment to the house. Thus, he started clear all those debris and separated the useful items. He was able to collect CGI Sheets, stones and wood from the old house which are still usable.

For first one and half year, he could not start building a house, so he settled in temporary houses, though his neighbors has already built the houses of their own style. He has doubt that if he didn't make a good house it might get collapsed in next earthquake. Also, he doesn't have enough money to build house immediately.

He was just a simple mason who learned by working with senior masons. He has not taken any formal training earlier before, until earthquake strikes in 2072BS. When different organization came to village with different programs he got chances of seven days earthquake resilient housing construction training. He said *"After training I realized of my previous works which had errors where bands were not kept, and gable walls were not light structure one "*. He had seen the different models of NRA and among them he was attracted by Stone masonry mud mortar building with wooden bands which are easily available in village.

First few months, he started to build other's houses in a construction team from where he got ideas of cost of construction. Since he didn't have enough money he started to think how to build earthquake resilient building in low cost. He has built a single-story house of stone mud mortar using a trained mason. He has used wooden bands required in different level. He said in comparison to RCC band it is less costly here in Gumda as road has just joined and transportation cost are too high especially for cement and sand which are not available locally. He said the trained masons took 1laks rupees as construction cost. He added *"I have utilized the old house wood which will cost around 40,000 in current market price and around 10 thousand saving from the stone and around 5 thousand from CGI Sheet"*. He has invested around 2.5laks cost for other materials and labor. He said he could build the houses with in the government aid.
