Photo: Participants at DFID partners meeting

During DFID partners meeting Mott-Mac, WFP, Focus-Np, Prayas-Np, Action-Np, PIN, CSRC, DCA, HRRP and OXFAM presented regarding project activities being conducted within the district.

Following discussions were put forward during the meeting:

- Discussion on safety and security
- Purnima project overview on activity planned and ongoing with implementing partners.
- As per OXFAM, due to lack of man-power between 18-45 years, elder people around 65 years are working which may be against organization policy.

NSET-Baliyo Ghar conducted district level interaction program with journalist regarding retrofitting of minor damaged houses at Dhading.

Photo: Participants at NSET district level interaction program with journalist

The interaction program with the district journalist was chaired by Dhading-GMaLI chief Rajendra K. C. where Dr. Ramkrishma Sharma explained about the retrofit techniques and their benefits. With the objective of developing disaster resilient communities in Nepal by standardization of guidelines/manuals, enhanced local capacity as well as increased awareness on disaster resilient construction through development of disaster/earthquake resilient construction, retrofit beneficiaries can benefit through this technique. He explained that there are some differences in the terms "Repair" and "Retrofit". Most of the individuals, seems to relate it with each other, but there is vast difference between them. Repair simply means maintenance of damaged parts replacement of them while retrofit applies to making of damaged parts more stronger through external supports. NSET has been focused on capacity building of construction workforce and awareness raising of community, provided that people are able to reconstruct their houses through owner driven approach linked with compliance mechanism and financial assistance.

Housing Typology Report

Name: - Maya Kumari Shrestha - Salyantar ward 2
Location: - Tripurasundari RM, (Salyantar) ward 2
It is RCC frame structured building which has meet the NBC.
The beneficiary has received 2nd tranche of government grant
and is waiting for 3rd tranche.
The construction of house is completed.

Name: - Amrita and Seti Maya Biswakarma
Location: - Netrawati RM, ward - 5 (Katunje VDC).
It is a single-storey earthquake resistant load bearing house.
It has brick masonry in cement mortar with all necessary
vertical and horizontal bands. The construction of house has
been completed and the beneficiary has received all tranches
of government grant.

Case Story

Story from Semjong-8(Tanjomane), Dhading

House of Nar Bahadur Tamang was severely damaged by Gorkha earthquake 2015. And he was in temporary shelter for about one and half year. And he also received first installment of rupees fifty thousand from Government of Nepal. He was planning to reconstruct house. He was confused a bit about the earthquake resistant construction. He thought that it would take huge money for Earthquake resistant construction. He had participated in Mason training organized under NSET Baliyo ghar. And yet he was confused about how to reconstruct his house. There was gap between the training which he undertook during the monsoon month August and the construction of his house in the month of November.

Photo: House owner Nar Bahadur Tamang

various precautions he should apply during the construction time. Also his learning from the mason training was refreshed. His whole family was convinced about the earthquake resistant construction both from the safety point of view and from getting other installments from the government. He was then getting confidence about the construction and then he started the construction work with the help of local masons. After 1 month he completed construction of his house. He was more encouraged when the Baliyo Ghar TV program covered his house when it

was in initial construction stage.

With the use of locally available construction material, and from constant supervision of BG mobile team Mr. Nar Bahadur Tamang was able to construct an earthquake resistant house in his village.

Now he is looking forward for getting other installment from the Government of Nepal. He has set an example that earthquake resistant house can be constructed with the locally available material and also the cost is not too high.
