

Displacement and temporary settlements in the Kathmandu Valley

Bungamati, Bhaktapur: local displacement
People still have access to their land, their jobs, schools and
Government services

Shelter and gardens – temporary settlement in Bungamati. Shows how local “displacement” like this means access to land and food production continues.

Examples of housing damage in Bungamati

Main issues / concerns: Bungamati

- 853 houses destroyed / families displaced.
- New By-Laws were only recently passed by MOUD for reconstruction regulations in the KTM valley
- Reconstruction of multi-story homes is more complex and expensive than rural equivalent
- Much more money needed up front (50k not enough)
- Much interest in the Govt. offer of low-interest loan (<2.5 lak), but no banks offering. Very complex application process.
- **These are not IDPs** – they are earthquake-affected people awaiting reconstruction solutions
- Their concerns are valid – but more relevant for HRRP co-ordination and advocacy, not IDP / durable solutions project.

The Bungamati Reconstruction Committee

- Exists to decide communally on design for reconstruction
- To lobby together, more effectively for support
- To defend and protect cultural heritage / vernacular architecture
- Evaluate materials supply chain issues / concerns
- Finding potential private investors for reconstruction

Bouddha, Kathmandu.
Displaced by earthquake and landslides in North Sindhupalchok (Chinese border area). Return not advised due to geo-hazard risks. Resettlement options not clear. Help needed to navigate NRA decision making systems. Support to NRA needed to develop guidelines and framework for resettlement (or return when area is safe).

After almost two years families have found local work, kids in schools. But their residence remains temporary. They wish to move on, to buy or have access to their own land, possibly within the Kathmandu valley. Bouddha, Kathmandu.

Main issues for Bouddha IDPs

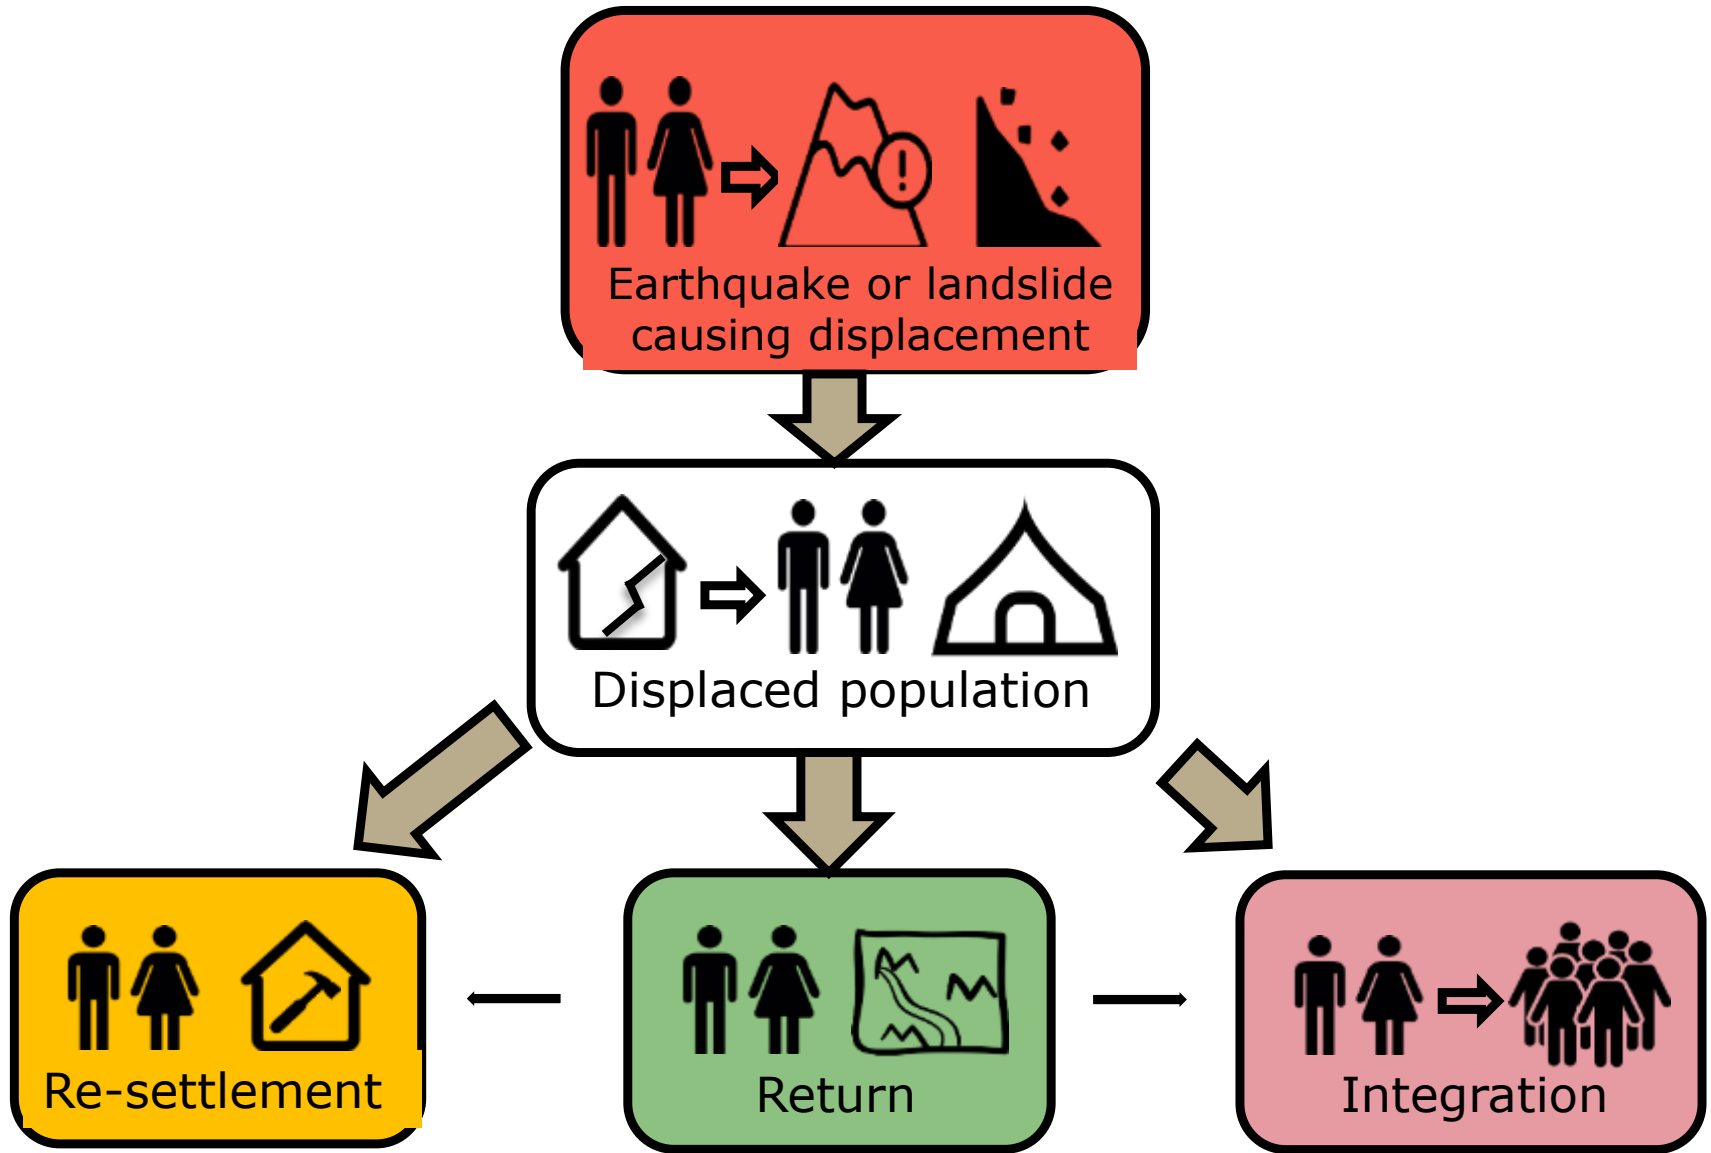

- Geo-hazard safety in Tatupani?
- Eviction threat from current settlement
- No clear information on how to use housing grant
- No information on resettlement support from NRA
- Need regular and reliable information

Geological Surveys: DFID supporting NRA to evaluate which areas are unsafe for reconstruction, resettlement or return.

Over 80 people died in this community when the earthquake triggered a major landslide.

Potential Solutions for Displaced Communities

Resettlement above
Ward 1

Ward 1 -
reconstructing

Ward 4 -
destroyed

Ward 2 - partially
displaced

Displacement into
agricultural land

IDPs and Geo-hazard Surveys

- DFID supporting an Oxfam-led NGO consortium to ascertain extent of displacement
- And to support the Government to develop a policy on resettlement
- To communicate with communities on where it is safe to rebuild
- And where return is too risky – and Govt. enabled resettlement is a necessity
