 - Rally – start at 8:00 Am from Puchhar Bazar, Dhading Besi
 - Formal Program - Start at 9:00 Am at DCC Hall, Dhading Besi
 - UMN will support for Banner
 - HRRP & NSET will coordinate for 21st Earthquake Safety Day Program.

21st Earthquake Safety Day – Dhading: -

- District Administration office (DAO) in collaboration with HRRP, NSET & UMN successfully conduct 21st Earthquake Safety day in Dhading District. Nepal marks Earthquake Safety Day (ESD) every year on 16 January (Magh 2 commemorating the Great Nepal-Bihar Earthquake of 1990 by organizing various activities nationwide. The main purpose of marking this Day has been to re-affirm national commitment to enhance Earthquake Resilience of Nepali communities and share and review past experiences & strategize further.
- Dhading District started with a Rally from Puchar Bazar at 8:00 am and ended in DCC, Siran Bazar at 8:45 am. All stakeholders, Government Bodies, Local Bodies, Municipality, Rural Municipality, NGO/INGO, Journalist, FM, TV, Nepal Police, Nepal Army, APF attend the Rally. The formal program started at 9:00 am at DCC hall by Rajaram Sharma which was chaired by CDO Bhagirath Pandey and Chief Guest Jaganath Nepal (DCC Chief). It started with a national anthem “Sayaũ thũga phũlkā hāmī, euṭai mālā nepālī and one-minute silence (Maun Dharan) for those who lost their lives during earthquake.

- 3) Referring to the devastating earthquake of 1990, DDMC explain the history & objective of celebrating Earthquake safety day while DLPIU- Building chief Mr Koshnath Adhikari present the current scenario along with issues and challenges of the district. Mr Adhikari present Reconstruction update of Dhading.
 - a) First Tranche - 70,713
 - b) Second Tranche - 59,753
 - c) Third Tranche – 42930
- 4) HRRP Technical Coordinator Mr Sachin Sapkota briefly explain HRRP contribution towards reconstruction along with short motivational speech.
- 5) The formal program ended with a Motivational speech from Chairperson Mr. Bhagirath Pandey. Mr. Pandey said, “Nepal is a Vulnerable country in Earthquake, Earthquake used to occur since long time ago and will occur in the future too, Earthquake do not kill people but during earthquake due to the failure of building people lost their lives, so we don’t have any option besides making Earthquake resistant building.”

Housing Typology Report

Name: - Rajan Paudel

Location: - Thakre Rural Municipality, Dhading

It is one storey special moment resisting frame structure (RCC) with material used M20 Grade of concrete in pillar, beam, band and 9" infilled wall with brick in cement mortar (1:4). It's floor area is less than 1000 sqft whose Column size is (9" x 12") with 6-12mmØ. The beneficiary has received 2nd tranche of government grants.

Name: - Timba Prasad Nepal

Location: - Thakre Rural Municipality, Dhading

It is two storey special moment resisting frame structure (RCC) with material used M20 Grade of concrete in pillar, beam, band and 9" infilled wall with brick in cement mortar (1:4). It's floor area is more than 1000 sqft whose beam size is (9" x 13") with 4-16mm Ø and Column size (12" x 12") with 4-16mm, 4-12mmØ. The beneficiary has received All Tranche of government grants.

Name: - Aatma Ram Tamang

Location: - Ramche – 07, Thakre Rural Municipality, Dhading

It is one storey load bearing structure with material used burned brick with cement mortar. It's floor area is less than 1000 sqft. He has use vertical pipes in place of vertical rod deu to which engineer has send this files to DSE for analysis. The beneficiary has received 1st tranche of government grants.

Name: - ChandraKant Duwadi

Location: - Nalang, Siddhalekh Rural Municipality, Dhading

It is a one storey plus attic stone mound mortar load bearing structure. It's floor area is less than 1000 sqft. The height of building is more than mention in the MRT. The beneficiary has received 2nd tranche of government grants.

Case Study

Mr. Sashiman Ghale: A man for change

This case is about the man named Sashiman Ghale who ran away from his birth place Sertung 30 years ago and learnt some mason skills by roaming and working at various places in Nepal and is now returned back to his birth place and is contributing his skill for building Earthquake Resistant Buildings. According to him, in search of works he has visited many places of Nepal and has strengthen his skills toward mason work. He has also worked in Saudi Arabia as a mason for 5 years. Although he is now permanent resident of Gorkha, Birutar vdc he is now helping his elder brother at Sertung ward no.5 to build his house earthquake resistant using Timber bands. He wasn't a trained mason toward Earthquake resistant building and he haven't met us before since, so, he used to visit our mason training model once a day and studied every component of that model.

One day when we made a visit in the village we met him, and he asked for the technical assistance. We advised him about the foundation and the bands according to government norms. When he started to build that house, it wasn't a very easy task for him. After making foundation when he began to construct the plinth band and since, that was the first house which was building beyond the old techniques, many people used to come over him and use to say it isn't the proper technique to construct buildings using wooden bands. His brother was also convinced with other people's words and began to ask him to construct with old techniques, at that time he was totally confused. After that he made a visit at our place and told to convince his brother and other people. Then, we met them and convinced to use black japan paint and construct the plinth band about 1ft above the ground level. Only in the next day he again came to us and began to say that his brother is not letting him to work, his brother started quarrelling with him saying "I don't have enough money to build further, first ask those Engineers to give me second installment then I will construct further". Then we again met his brother and told not to worry about installment and if they follow government code of conduct they will definitely get all the installments. Then they convinced to construct ahead. Now Sashiman and his brother only two of them are working at every part to construct their safe house.

Sashiman has his own house damaged at Gorkha but he says that he first built his brother's house and some other people's house at Sertung and teach them to build earthquake resistant house and then he will build his own house at Gorkha.
