Field Visit Reports

Date:	Location:	Participants
13 th June 2018	Jiri Municipality	Binod Kalauni, Ravi Pajiyar and Kamal B Mahat and DSE Ms Hisila Maharjan, DLPIU(Building Engineer) Mr Rajarshi Ghimire
Objective(s)	- To observe the construction modality of the timber houses in Jiri Municipality; - To discuss about the compliance issues of timber houses with the Jiri Municipality's stakeholders, local representatives, technicians, beneficiaries; - To apply the Light Timber manual orientation in the field and collect practical feedback	
Summary	A joint field visit (DLPIU and HRRP) was conducted soon after the conduction of orientation of Light Timber/Steel Frame Structure in Jiri Municipality ward numbers 4, 5, 6 and 7 where light timber building is common. During the visit, different houses made from the timber were observed in which few were two stories and most of them were single story. Further, in the field various technical faults were found mainly is bracing missing. Additionally, in some of the houses we saw that top plate are not continuous, formed by joining two members but joint are not much rigid to handle load. In this regards, we suggested house owners to do minor corrections by providing bracings and proper joint connections to be eligible for government housing grant. Since, the field visit was jointly with the technical staff working in particular ward they were seen much curious and attentive to get knowledge about the light timber structure construction techniques and correction measures for existing buildings.
