EF-SR: Progress Update

- **ToT** on Earthquake Resilient Technology provided to **170 trainers**
- Skills for Reconstruction implemented through **17** private sector **Training Providers**
- **1197 people** trained, total 154 houses (**59** completed) houses are being constructed
- Regular coordination with government agencies; Information required to DUDBC and NRA provided including training information
- Regularly **participating** HRRP and district coordination **meeting**

Some Learning and Challenges:

Learning:

- The training model of EF-SR is found effective and liked by the communities
- Proper orientation and awareness to the community is necessary before implementing training
- Collaboration with local government (VDC level) is effective to make the programme successful
- Need to make all the construction materials ready before starting the training
- Required intensive Monitoring during training and reconstruction
- Due to difficult topography required to have more monitoring staff

Issues and Challenges:

- Making available the **quality stones** to use as through stones and **woods**
- Treatment of Woods and bamboo
- Use of locally available materials without harming to the environment
- Getting access of Government Grant to the owner of already built houses
- Very difficult to manage construction materials and fund for the real poor participants
- Delay in releasing government grant may affect to achieve the outcome of the project in time
- Due to lack of sufficient land with landowner, DUDBC house designs can't be followed as it is

Completed House in Marbu, Dolakha
