DECEMBER 2023

ACKNOWLEDGEMENTS

I extend my heartfelt gratitude to the honorable Yubaraj Dulal, Minister for Physical Infrastructure and Development of Bagmati Province, for his invaluable insights and guidance. I also wish to express sincere appreciation for the continued support and cooperation of Mr. Amrit Shrestha, the Province Secretary, and Senior Division Engineer Chandra Kaji Gurung. Additionally, I acknowledge the valuable cooperation of Ms. Reshma Shrestha from CRS. My gratitude extends to my team member, Dr. Inu Pradhan Salike, for her contribution to understanding the disaster dimension of the people's housing program. I am also thankful to our dedicated research assistants, Ms. Sekiya Shakya and Sanju Kaini, for the efficient fieldwork and meticulous data compilation.

CHAPTER 1

STUDY BACKGROUND

Housing conditions of PHP constructed house (left) and former house (right) of the beneficiary.

CHAPTER 1: STUDY BACKGROUND

1.1 Introduction

The Janata Awas Program, launched in 2009 (FY 2066-67) by Nepal's Department of Urban Development and Building Construction (DUDBC), aimed to provide safe, affordable housing for economically weaker and marginalized communities. Initially, it began in three districts—Siraha, Saptari, and Kapilvastu—targeting Dalit and poor Muslim populations. By 2018, it expanded to 27 districts, completing around 17,039 housing units, prioritizing secure, sustainable, and earthquake-resistant solutions in collaboration with stakeholders like local authorities, NGOs, and community groups. It emphasized affordability through cost-effective methods, local materials, and promoted community engagement, local craftsmanship, and sustainable home designs for long-term development and empowerment.

Following federal restructuring, the program shifted from DUDBC to the Provincial Government under the Ministry of Physical Infrastructure Development from Fiscal Year 2074-75. While continuing under the Provincial Government, including Bagmati Provincial Government (BPG), the program encountered limitations in including all impoverished households beyond those classified as marginalized. These households encompass disadvantaged, extremely deprived, and economically vulnerable populations. The policy constraints in the Janata Awas Karyabidhi, 2073 failed to account for these households despite their substantial numbers. Consequently, acknowledging the imperative for

inclusion, BPG initiated a study in collaboration with the Department of Architecture, Pulchowk Campus, IOE, and CRS to identify methods for integrating these disadvantaged and deprived households into the People's Housing Program (PHP).

1.2 Study Objectives

The primary aim of this study is to examine how disadvantaged and economically deprived households can be integrated into the People's Housing Program (PHP).

The specific objectives are:

- Review existing PHP policies for provisions favoring inclusion of disadvantaged households.
- Assess stakeholders' opinions on current PHP housing outcomes and including economically disadvantaged groups.
- Develop a measurable indicator-based framework for selecting beneficiaries among the economically deprived for PHP inclusion.
- Establish a framework for collaboration between CRS and Bagmati Province to scale up PHP, encompassing disadvantaged and deprived communities.

1.3 Study Methodology

This study involved a thorough review of national policies for the People's Housing Program (PHP). It analyzed these policies to find specific provisions supporting the inclusion of disadvantaged households and also looked into global housing policies. These efforts aimed to discover effective ways used in choosing beneficiaries for housing programs, providing valuable insights for PHP inclusion strategies. The study engaged key institutional stakeholders through interviews to understand their perspectives on PHP housing outcomes and efforts to help economically disadvantaged groups. Observations of constructed houses were also made to better understand the program's impact. To gather data, two surveys were conducted. One asked PHP beneficiaries about their satisfaction using a five-point scale, while the other collected opinions from institutional stakeholders on the beneficiary selection process.

Using insights from policy analysis, on-site observations, and stakeholder inputs, the study formulated an indicator-based framework. This framework aimed to improve beneficiary selection criteria, making the People's Housing Program more inclusive and effective. During the Sindhuli visit, officials were interviewed, surveys conducted at Dudhuli Municipality, and discussions held with Sindhuli MoUD officials to assess the program's status and improvements. Collaboration opportunities with Bhumi Aayog were explored. In Chitwan, surveys and interviews were conducted at Ichchhakamana Rural Municipality and Rapti Municipality to understand challenges faced by the Chepang and Pariyar communities in the program. A

total of 76 interviews assessed overall satisfaction and program outcomes, including beneficiary selection and housing design.

Figure 1 Interviews and Survey in Dudhauri Municipality

Figure 2 Interviewing Beneficiaries of PHP

1.4 Study Limitations

One limitation lies in the study's focus primarily on national policies and PHP initiatives, which could potentially limit broader applicability to different housing programs worldwide. Relying on stakeholder interviews and surveys might introduce subjectivity, thereby influencing findings. Additionally, the study's scope may restrict a comprehensive understanding of the varied challenges faced by disadvantaged households beyond those addressed within the PHP framework.

1.5 Study Rationale

Marginalized communities refer to social groups excluded from societal participation due to factors like economic status or social identity, often facing limited access to resources and opportunities. Poor communities encompass those with low socioeconomic status, experiencing economic hardships and restricted access to essential services, resulting in unfavorable developmental outcomes. Disadvantaged communities encounter structural barriers impeding their progress, experiencing unfavorable environmental conditions and limited service access, hindering their socioeconomic advancement.

Marginalized, poor, and disadvantaged communities often reside in inadequate housing conditions, whether owning land or facing landlessness, significantly limiting their access to decent and safe housing. This vulnerable living situation or the absence of land ownership, combined with economic disadvantages, creates significant barriers, pushing them towards informal or substandard housing arrangements. Hindered by landlessness, these communities encounter immense challenges in securing affordable housing, further entrenching their disadvantaged status within society.

Inclusive target selection criteria and beneficiary selection within government low-cost housing programs are vital to addressing the housing needs of these communities. Implementing inclusive criteria ensures that individuals facing landlessness and economic disadvantages are not excluded from housing assistance. By specifically targeting these groups and providing customized support tailored to their unique challenges, these programs have the potential to break the cycle of housing disparity and offer dignified living conditions to marginalized, poor, and disadvantaged communities.

By specifically targeting these groups and providing customized support tailored to their unique challenges, these programs have the potential to break the cycle of housing disparity and offer dignified living conditions to marginalized, poor, and disadvantaged communities.

CHAPTER 2: STUDY AND POLICY CONTEXTS

Janta Awas Program with the collaboration of
Ekikrit basti program in Dudhauri Municipality.

CHAPTER 2: STUDY AND POLICY CONTEXTS

2.1 Review of Policy: Regional and International Context

2.1.1 Review of Housing Policy Reform, India

Reforming housing policies stands as a crucial strategy to ensure adequate and affordable housing for marginalized communities. According to Shah (2019), India's significant housing policy changes over decades cater to the poor, starting from the Low Income Group housing scheme in 1954, offering loans to those earning less than Rs.6000 annually. Subsequent policies like the Slum Clearance and Improvement Scheme in 1956, the Housing Scheme for the Middle Income Group in 1959, and the establishment of HUDCO in 1970 aimed at rural housing and sustainable development for lower-income groups. Initiatives like the Indira Awas Yojana in 1985 and the National Housing Bank in 1987 focused on rural poverty and housing finance, respectively. Rajiv Awas Yojana (RAY) in 2009 aimed for a slum-free India by granting property rights to slum residents. The pivotal Pradhan Mantri Awas Yojana (PMAY) launched in 2015 aims for 'Housing for All' by 2022, providing credit-linked subsidies and affordable housing

partnerships. Policy enhancements in 2017 expanded PMAY with Public-Private Partnership models and increased carpet area for MIG housing. Moreover, granting Affordable Housing Infrastructure status aims to facilitate institutional credit and growth. These reforms collectively focus on affordable housing and sustainable development, aiming to alleviate housing challenges faced by economically weaker sections in India (Shah, 2019).

2.1.2 Housing for Poor: Review of Target Selection and Beneficiary Selection

Regional Experience: The Pradhan Mantri Awaas Yojana (PMAY), India

PMAY, formerly known as the Indira Awaas Yojana, originated in 1985-86 as part of the Rural Landless Employment Guarantee Programme (RLEGP). It gained autonomy from January 1, 1996, emerging as a crucial scheme of the Ministry of Rural Development. PMAY focuses on constructing houses for the rural population living below the poverty line, providing grants for home construction to marginalized groups like Scheduled Castes/Scheduled Tribes and freed bonded laborers.

It ensures a capped allocation of 40% for non-SC/ST beneficiaries and reserves 3% for disabled persons below the poverty line.

Target Group Identification

The Pradhan Mantri Awaas Yojana (PMAY) aims to support those below the poverty line in rural areas, focusing on Scheduled Castes/Scheduled Tribes, freed bonded laborers, and non-SC/ST groups. It ensures a capped allocation of 40% for non-SC/ST beneficiaries and reserves 3% for disabled persons below the poverty line, including them in categories such as SCs, STs, and others.

Beneficiary Selection Criteria

PMAY's beneficiary selection criteria prioritize several marginalized and vulnerable groups. This includes freed bonded laborers, SC/ST households facing atrocities, and those led by widows or unmarried women within these communities. Additionally, it encompasses SC/ST households affected by natural calamities, other SC/ST households, and non-SC/ST households below the poverty line. Furthermore, families or widows of defense and para-military personnel who lost their lives in action, as well as those displaced due to developmental projects or nomadic tribes with disabled members, are considered for housing support under PMAY, provided they fall below the poverty line. These criteria ensure targeted assistance to those in utmost need within rural communities.

Implementation

PMAY's implementation involves funds distributed to states based on 75% rural housing shortage and 25% poverty ratio. Housing deficits are determined using official Registrar General of India data from the 2001

Census. The scheme provides financial aid: ₹1.20 lakhs in plain areas and ₹1.30 lakhs in hilly regions and difficult areas. Payments occur in three stages:

- ₹15,000 sanctioned at the Panchayat Samiti level.
 - ₹45,000 upon completing the Plinth Level & Foundation.
 - ₹60,000 after finishing the roof, doors, and windows.
- Payments are made through DBT via ABPS in PFMS.

PMAY implements a three-installment assistance plan, releasing funds through Direct Beneficiary Transfer (DBT) from Aadhaar Based Payment System (ABPS) by Public Financial Management System (PFMS). Eligibility is determined based on parameters from the Socio-Economic and Caste Census 2011, encompassing various vulnerable groups, such as those in kutcha houses, destitute families, manual scavengers, and primitive tribal groups. (UrbanDesignLab, 2021)

Box 1

PMAY - G

Special provisions include support for toilets through SBM-G, technical assistance, loans up to Rs.10,000, and convergence with other government schemes for basic amenities.

Additional Features

PMAY focuses on strategic housing placement within villages for safety and convenience. It advocates for adaptable house designs, ensuring a minimum plinth area of 25 sq. meters while prioritizing beneficiary

Figure 3 PMAY in Odisha. Source: (PMAY, n.d.)

preferences, climatic needs, and cultural considerations. The scheme also facilitates access to unskilled labor from MGNREGS and offers financial aid shared between Central and State governments based on regional requirements. Special provisions include support for toilets through SBM-G, technical assistance, loans up to Rs.10,000, and convergence with other government schemes for basic amenities. All payments are made electronically to Aadhaar-linked bank or post office accounts, and efforts are made to educate beneficiaries about PMAY-G.

2.1.3 International Experience

A review of regional and international policies for target group identification and beneficiary selections reveals a range of approaches in housing programs globally. Various nations have designed specific criteria to identify target classes and beneficiaries. Singapore's HDB focuses on low and middle-income citizens, prioritizing lower-income households based on income and citizenship status. Brazil's Minha Casa Minha

Vida program targets low-income families, particularly those in informal settlements or inadequate housing, assessing beneficiaries through a social needs assessment.

South Africa's Breaking New Ground (BNG) Housing Policy identifies beneficiaries among low-income families and previously disadvantaged individuals, prioritizing those in informal settlements or facing inadequate housing. India's Pradhan Mantri Awas Yojana (PMAY) targets economically weaker sections and marginalized communities, emphasizing transparent beneficiary selection based on income, family size, and housing conditions, with a preference for those lacking proper housing.

Sweden's social housing programs cater to low to moderate-income households, allocating housing units based on income and housing needs. Canada's National Housing Strategy aids vulnerable populations such as low-income families, Indigenous people, seniors, and the homeless, selecting beneficiaries based on housing needs and vulnerability. These tailored criteria ensure that housing assistance reaches those most in need within their respective societies, reflecting the diverse strategies employed across nations to address housing challenges.

Box 2

SOCIAL NEEDS ASSESSMENT

Adopted by Brazil's Minha Casa, Minha Vida program to assess beneficiaries.

2.2 Review of Policy: Nepali Context

2.2.1 Housing in Constitutional Provision and National Plans

Nepal's Interim Constitution of 2007 outlines the state's responsibilities towards citizens' fundamental rights and social welfare. Article 33 asserts the commitment to ensure education, health, housing, employment, and food sovereignty for all citizens. It also aims to provide economic and social security, particularly by granting land to economically and socially backward classes like the landless, bonded laborers, and others. Article 35 details specific state policies targeting marginalized communities, peasants, and laborers below the poverty line. These policies involve reservations in education, health, housing, and employment for disadvantaged groups such as indigenous tribes, Madhesis, Dalits, and other marginalized segments. Additionally, the constitution stresses positive discrimination by providing special provisions for minorities, including landless individuals, bonded laborers, disabled persons and victims of conflict. It also prioritizes providing basic land for resettlement to liberated bonded laborers. This constitutional framework underscores Nepal's commitment to addressing socio-economic disparities and promoting equal opportunities for all citizens.

Nepal's history of housing initiatives, as detailed in the National Housing Policy (NHP, 2014), spans various national plans and underscores the nation's commitment to housing development.

Commencing with the First Plan (1956-1961), projects like the Rapti Valley Multipurpose Project focused on resettlement, setting the precedent for subsequent plans. Each plan introduced measures to address housing

needs: the Ninth Plan (1995-2000) initiated land development for housing plots and model village programs, particularly aiding marginalized groups (NHP, 2014). Later plans, such as the Twelfth (2010-2012) and Thirteenth (2013-2015), emphasized constructing low-cost housing units, notably supporting the poor, disadvantaged, and excluded groups through the People Housing Program (NHP, 2014). These concerted efforts underscore Nepal's ongoing commitment to housing accessibility and affordability, especially for vulnerable societal segments.

The constitution stresses positive discrimination by providing special provisions for minorities, including landless individuals, bonded laborers, disabled persons and victims of conflict.

2.2.2 Policies and Acts

Nepal's housing policies have evolved across various iterations, addressing critical aspects of housing development. The Nepal Housing Policy of 1996 focused on supplying serviced housing plots through land development programs executed by Town Development Committees and private developers, alongside initiatives promoting shelter finance and advancing construction material and technology. The subsequent National Shelter Policy in 2012 aimed to increase housing production suitable for all income groups while ensuring safety and environmental sustainability. It emphasized effective financial resource mobilization and institutional reforms, delineating roles for governmental, non-governmental, private sectors, and communities. Additionally, the National Housing Plan of 2014 emphasized housing provision through institutional and private sectors, particularly for low-income groups, while prioritizing capacity building initiatives within the housing sector. These policies collectively underscore Nepal's commitment to fostering accessible, safe, and diverse housing options for its populace.

Similarly, The Right to Housing Act of 2018 in Nepal focuses on ensuring and safeguarding citizens' access to adequate housing. It mandates the Government of Nepal, Provincial Government, and Local Levels to facilitate easy access to housing resources for citizens. Moreover, the Act emphasizes the provision of housing facilities by requiring the Government of Nepal and Provincial Government to extend financial and technical support to the Local Level for housing projects (NLC, 2018).

2.3 Initiatives undertaken regarding Housing in Nepal

Figure 4 PHP in Dudhauli Municipality

The Nepalese government has prioritized housing and relocation since the country's inception in 1952. Its national plans have included housing initiatives that span decades, targeting diverse segments like low-income groups, government employees, and marginalized communities. For instance, the Twelfth Plan (2010-2012) witnessed the construction of 4850 low-cost housing units under the People Housing Program (Janata Awash Karyakram). Subsequently, the Thirteenth Plan (2013-2015) added 2237 more low-cost units, including 130 for urban poor groups (NHP, 2014). Despite these efforts, Nepal still faces a significant shortage of housing units to accommodate its growing population.

Table 1 National Housing Plan 2014 (NPC, 2016)

S.N.	PROGRAM DESCRIPTION	UNIT	TARGET
1	People Housing Program i.e. Janata Awaas Karyakram (3000 units per year)	Residential Building	30,000 (60% completed till 2023)
2	Housing for poor families residing in slums and squatters according to Millennium Development Goal (100 families per year)	Families	1,000
3	Apartment housing for urban poor (25 families in 10 cities per year)	Families	2,500
4	Co-operative housing program (500 families per year)	Families	5,000
5	Housing facility program through rehabilitation center (100 units per year)	Person	1,000
6	Low cost rental housing program	Families	5,000
7	Private housing program(1000 developed residential plots/ year)	Developed residential plots	10,000
8	Addition of floors and repair and maintenance of existing residential houses	Residential houses	1,10,000
9	Construction of private houses	Residential houses	2,25,000
TOTAL			3,90,000

2.4 Countrywide Existing Situation

The Nepal Living Standards Survey (Statistics, 2016) reveals a shifting housing landscape with declining household ownership (from 93.8% to 89.7%) and a notable rise in renting trends (from 2.2% to 7.8%). Despite changes, the average dwelling size remained consistent, while the average rooms per household increased (from 3.0 to 4.6). Housing adequacy showcased notable improvements, with the percentage of households reporting inadequate housing decreasing significantly (from 64.1% to 22.0%) over the survey period. However, persistent challenges relating to poverty and food scarcity remain evident. While income inadequacy decreased, a significant portion of households still faced food insufficiency in the past month (7.5%). Nepal also grapples with a considerable poverty rate (22.71%), notably higher in rural areas (28.48%) compared to urban zones (16.93%). These findings highlight the urgency for inclusive policies that support low-income groups in accessing suitable housing and address poverty comprehensively in Nepal.

The poverty and land ownership statistics from Nepal (Statistics, 2016) illustrate a crucial correlation between land access and poverty rates. Notably, individuals without land or owning less than 0.2 hectares encounter significantly higher poverty rates, especially in rural areas, exceeding 28.48%. This underscores the pressing need for housing solutions for the landless and those with minimal land, particularly in rural settings, to address housing inadequacies amidst prevalent poverty. The marginalized population in Nepal, comprising 61,04,432 individuals, constitutes 20.9% of the total population (NSO, 2021). Among the most populous groups are Bishwokarma/Kami with 14,70,010 individuals, Musalman with 14,18,677, and Pariyar/Damai with 5,65,932. Conversely, the least populous include Kusunda (253), Bankariya (180), and Surel (318) (NSO, 2021). This extensive diversity within marginalized communities underscores the need for housing strategies that cater to the distinct requirements of each group, ensuring equitable access to adequate housing across Nepal's varied caste demographics.

Notably, individuals without land or owning less than 0.2 hectares encounter significantly higher poverty rates, especially in rural areas, exceeding 28.48%

2.5 Bagmati Province

The Bagmati region in Nepal showcases significant diversity in poverty rates, as per 2013 CBS data. While some districts like Chitwan, Kathmandu, and Lalitpur display lower rates around 7.6% to 8.9%, others such as Sindhuli, Rasuwa, and Makwanpur report higher rates ranging from 27.9% to an alarming 38.3%. These disparities highlight the pressing need for targeted interventions to address poverty disparities among these districts. Evaluating the population below the poverty line in these areas reveals that Kathmandu, Sindhuli, and Makwanpur harbor the highest numbers of impoverished individuals. Such statistics underscore the urgent requirement for tailored support and initiatives to uplift these deprived, disadvantaged, and marginalized communities.

Table 2 Poverty Situation in Bagmati Province (CBS,2013)

S. N.	DISTRICT	POVERTY RATE (% OF DISTRICT POPULATION)	POPULATION OF POOR BY DISTRICT (IN THOUSAND)
1	Bhaktapur	12.5	37
2	Chitwan	8.9	51
3	Dhading	18.8	63
4	Dolakha	26	48
5	Kathmandu	7.6	128
6	Kavrepalanchowk	13.9	52
7	Lalitpur	7.6	34
8	Makwanpur	27.9	116
9	Nuwakot	20.3	56
10	Ramechhap	25.6	52
11	Rasuwa	31.6	13
12	Sindhuli	38.3	112
13	Sindhupalchowk	25.4	73

Bagmati Province's indices reveal significant developmental challenges. The 2019 Human Development Index (HDI) stood at 0.661, with a 24% loss in human development due to inequality, and the Gender Development Index (GDI) reported 0.051, signifying gender disparities. The 2018 Multidimensional Poverty Index (MPI) reported a headcount of 12.24%, with severe poverty at 4.7%, vulnerable poverty at 20.5%, and an overall poverty rate of 35%. These figures, combined with province indicators such as nutrition (11.8), child mortality (12), education years (24.8), school attendance (3.3), access to clean cooking fuel (12.7), water (4.3), electricity (3.6), quality of flooring and roofing (12.5), and possession of assets (8.7), illuminate the multifaceted nature of poverty within the province. This emphasizes the need for strategic interventions to enhance the socio-economic status of its residents, particularly the deprived, disadvantaged, and marginalized communities. Moreover, the marginalized population in Bagmati Province, amounting to 487,820 individuals, demands attention, with Bishwokarma/Kami, Musalman, and Pariyar/Damai being the most populous communities (NSO, 2021). This demographic disparity underscores the necessity for housing policies addressing the specific needs of each marginalized group, ensuring equitable access to adequate housing across various caste demographics within the province.

2.5.1 Provincial Implementation Status of PHP

The available data from federal agency Department of Urban Development and Building Construction (DUDBC) and Bagmati province are analyzed to assess the implementation status of PHP programs. According to which, it is seen that out of the 7

“ The 2018 Multidimensional Poverty Index (MPI) reported a headcount of 12.24%, with severe poverty at 4.7%, vulnerable poverty at 20.5%, and an overall poverty rate of 35%.

provinces, Janta Awaas Program has been implemented the highest number in Madhesh Province and the lowest number in Bagmati Province.

The progress in housing construction varies among provinces. Madhesh Province leads, completing 53.7% of the total houses with 5317 by 2076/77. Bagmati Province shows steady progress with 698 houses by 2076/77, while Gandaki, Lumbini, and Karnali Provinces demonstrate gradual advancement, reaching 1490, 3888, and 1335 houses, respectively, by 2078/79. Sudurpaschim Province achieved 1676 houses by 2076/77. Overall, 18,152 houses were completed across all provinces, underlining the need for sustained efforts to finish remaining constructions. The housing completion progress across provinces displays varied trends. Madhesh Province leads the way, completing 53.7% of total houses, amounting to 5317 by 2076/77, with 10217 houses remaining for construction. Bagmati Province has shown consistent progress, reaching 698 completed houses by 2076/77, leaving 1378 for construction. Other provinces, such as Gandaki (1490), Lumbini (3888), Karnali (1335), and Sudurpaschim (1676), have made significant strides in housing construction by 2078/79. Collectively, 18,152 houses have been completed across all seven provinces, emphasizing the ongoing need to complete the remaining 20,779 constructions to fulfill housing targets.

Figure 5 Provincial Implementation Status of PHP

Figure 6 Provincial Implementation Status of PHP in number

2.5.2 Implementation Status in Bagmati Province

The assessment of PHP status in Bagmati province as of 079/80 indicate , Makwanpur completed 75 houses for 197 beneficiaries, yet 122 houses await construction. Chitwan finished 116 out of 192 houses, leaving 76 in progress. Dolakha's 55 beneficiaries saw 39 houses completed, with 16 pending. Kavrepalanchowk completed construction for all 5 beneficiaries. Meanwhile, Sindhupalchowk, Ramechhap, and Sindhuli completed their constructions. Sindhuli, with 1225 beneficiaries, completed 492 houses, leaving 733 for construction. Nuwakot completed 73 out of 93 houses, with 20 remaining. Dhading and Rasuwa are making progress, with 191 and 34 houses respectively, and 30 and 16 houses awaiting completion. Overall, out of 2038 beneficiaries, 1023 houses have been constructed, while 1013 remain pending.

The data showcases the progress of installments in a housing program across different cases. The first installment received varies between 11 and 368, while the second installment received ranges from 3 to 371. Notably, there are no pending third installments in most cases, except for a few instances where it ranges from 0 to 32. Regarding the final or fourth installment, the pending numbers span from 0 to 66, indicating differing levels of completion or ongoing status across the cases.

Figure 7 Beneficiaries Completed houses and Remaining Construction (079/80)

Figure 8 Bagmati Province: Status up to Fiscal Year 079/080

2.6 Institutions Related to PHP

2.6.1 Rastriya Bhumi Aayog

The Government of Nepal, pursuant to the Land Act of 2021 (Section 52B, sub-sections 3 and 6), established The National Land Commission on August 25, 2078. This commission operates with the specific goal of providing land to landless Dalits, squatters, and residents in need of settlement management. The commission's formation was mandated to address the critical issue of landlessness among marginalized communities.

Through a systematic process to identify landlessness, applicants submit necessary documents, including Nepali Citizenship and a proof statement by a local resident (Aaina Sammati) regarding the applicant's residence, to District Committees. They are required to submit applications along with *bibaran* (a detailed description) of their entire family residing in the residence, as per the Landless Dalit, Landless Sukumbasi, and Unmanaged Settlement: Work Procedure, 2078. These applications are accompanied by self-announcements that the applicant and their family do not own any land anywhere in Nepal. This self-announcement bears the consequence of punishment based on the Law of Nepal if found false. Additionally, applicants declare their lack of capacity to own land based on their income sources and work, affirm that they haven't received any land or residence from Government projects, and indicate cases where they possess *Lal Purja* (land ownership documents) unusable for residence or other purposes due to disaster risk, with the intent to transfer it to the government.

Verification entails local residents confirming residency (*Nagarikata*) and cross-referencing this information with land records at the Land revenue (*Malpot*) Office. Meticulous assessment categorizes land for housing (*Awas*) or agriculture (*Krishi*). The process includes submitting applications, verifying land absence, categorizing land types, and employing satellite imagery. Official documentation is provided, disputes resolved at the Ward office, and allocation requests made to the District Committee. Despite this structured process, challenges persist as indicated below, hindering the initiative's efficacy in addressing housing needs in Bagmati Province.

Interdepartmental Coordination: Effective collaboration among governmental bodies like the Ministries of Physical Infrastructure Development, Urban Development, and Bhumi Aayog remains a significant challenge, hindering streamlined efforts towards resolving landlessness.

Land Sale Irregularities: Land designated for the marginalized, even if identified as *Ailani* or *Parti*, is sometimes sold, compromising the intended purpose and causing further complexities in land allocation.

Intra-Family Disputes: Lack of clear property boundaries and disputes within families over land ownership pose obstacles, leading to prolonged conflicts and hindering the allocation process.

Discrepancies in Land Size: The disparity between the size of Ailani Jagga (designated land) and the government-provided plots creates disputes, often resulting in conflicts regarding the plot sizes granted.

2.6.2 Provincial Ministry of Bagmati Province

The Ministry of Physical Infrastructure and Development (MoPID) in Bagmati Province, established after Nepal's Constitution was enacted, plays a pivotal role in policymaking, organization, and research for diverse physical infrastructure projects. This encompasses initiatives in transportation, building, housing, and urban development planning across districts within Bagmati Province. One of its key responsibilities is overseeing the implementation of People's Housing Programs, specifically targeting marginalized, poor, disadvantaged, and deprived communities in the region. The Department of Urban Development and Building Construction (DUDBC) under the Ministry of Urban Development (MoUD) at federal level supports the supervision of the beneficiary selection process, house construction, legal ownership procedures, issuance of completion certificates, and timely distribution of installment tranches.

2.6.3 Provincial Janta Awas Coordination Committee

The committee comprises members from the Ministry of Physical Infrastructure and Development, Provincial Planning Commission, Ministry of Economic Affairs and Planning, and Ministry of Internal Affairs and Law. Its primary responsibilities involve evaluating constructed houses, coordinating with the Ministry of Finance for construction plan changes, and collaborating with DUDBC, Municipality, and other ministry officials. Furthermore, the committee approves applications from vulnerable groups like the elderly, single women, orphaned children, and disabled individuals, ensuring they receive essential welfare support. It also collaborates with pertinent ministries to facilitate infrastructure development. The committee consists of the members of Provincial Assembly, District Administration Office, DUDBC and Municipality/ Rural Municipality.

2.7 Review of Janta Awas Working Procedures-2075

It points out that the criteria lacks inclusivity, failing to consider legal, social, economic, and other crucial factors for just development.

The Janata Awas Karyakram Karyabidhi- 2073, followed by Janata Awas Karyakram Namuna Karyabidhi-2075, was primarily designed to provide secure housing for economically weaker and marginalized sections of society. Consequently, its focus was centered on identifying and selecting beneficiaries from these communities exclusively. The critique addresses the limitations of the Janata Awas Karyakram Namuna Karyabidhi-2075 in catering only to marginalized and economically poor groups, disregarding the broader needs of deprived communities. It points out that the criteria lack inclusivity, failing to consider legal, social, economic, and other crucial factors for just development. Specifically, the highlighted criteria, despite their systematic approach, focus primarily on income, social background, and specific housing needs, overlooking diverse societal challenges faced by different communities. The process lacks adaptability and flexibility to address nuanced socio-economic issues beyond the designated criteria, calling for a more comprehensive and inclusive approach to ensure equitable housing solutions for all marginalized and disadvantaged communities.

The procedure outlines criteria for identifying the target class and selecting beneficiaries, along with an evaluation system for these criteria. The main marginalized groups included in the people housing programs initiated by federal and provincial authorities to date are as follows:

- Dom, Musahar, Chamar, Dusadh
- Khatwe, Gandharba, Pariyar, Badi

- Bishwakarma, Sarki, Kalar, Kakaihiya
- Kori, Khatik, Chidimar, Tatma
- Dhobi, Pattharkatwa, Pasi, Batar
- Mestar, Sarbhanga

2.7.1 Target Class Identification Criteria

The table exhibits the criteria that guide the selection of economically disadvantaged and marginalized communities for the People's Housing Program. Meeting any criterion under the legal basis qualifies a household for inclusion in the program. Additionally, beneficiaries must achieve a mandatory score from criteria 4, 5, and 7 to qualify.

Table 3 Janata Awas Karykram Namuna Karyabidhi-2075

S. NO	TARGET CLASS IDENTIFICATION	BENEFICIARY SELECTION
A	LEGAL BASIS (UNDER SECTION 3)	1. House Area (per sq ft/person) 2. Used Land Area (per sq ft/person) 3. Flooring type (inside the house) 4. Wall of the house (material and construction) 5. Roof of the house (material and construction) 6. Minimum 10 houses in the settlement (to be qualified for the program implementation) 7. Gender (male/female) 8. Land ownership (owned or no land) 9. Agriculture land (have or do not have)
	Evidence of continuous stay in the past.	
	Land Ownership Certificate,	
	Evidence of Land Tax Payment, and	
	Local Government Confirmation of the beneficiary's legal stay status.	
	Evidence of Users fee Payment (water supply, electricity, etc.).	
B	PHYSICAL CONDITION	
	The physical condition of the house occupied by the target group.	
	Local government's confirmation of inclusion in the target group	

2.7.2 Beneficiary Selection Process

The beneficiary selection process involves a structured five-step procedure overseen by various institutions. Firstly, at the grassroots level, individuals or families keen on the housing program submit a Request Notice to their Village Development Committee (VDC) or Municipality to express their interest in seeking aid. Secondly, these requests are scrutinized by a District Level Committee, responsible for assessing eligibility based on criteria like income level, social background, and housing needs. Thirdly, the District Level Committee conducts on-site surveys of potential beneficiaries' homes to gather detailed information about their housing conditions and specific requirements.

The Karyabidhi falls short in considering the disadvantaged poor, irrespective of class or ethnicity.

The Committee categorizes beneficiaries based on need and priority to ensure the most vulnerable receive aid. Subsequently, the selected list is forwarded to the District Division Office, involving institutions like the Department of Urban Planning and Building Construction District Office, Janata Awas Karyakram Unit and Construction Committee. However, the Karyabidhi falls short in considering the disadvantaged poor, irrespective of class or ethnicity, focusing primarily on the marginalized and economically challenged segments of society.

Rapti Municipality

CHAPTER 3: FIELD ASSESSMENT, FINDINGS & LESSONS

Ichchhakamana Rural Municipality

Dudhauri Municipality

CHAPTER 3: FIELD ASSESSMENT, FINDINGS AND LESSONS

3.1 Field Assessment

Field assessments were conducted in Rapti Municipality and Ichchhakamana Rural Municipality in Chitwan, and Dudhauri Municipality in Sindhuli. In Rapti Municipality, visits were made to Bhandara, Piple, and Birendranagar sites, while in Ichchhakamana Rural Municipality, Darechowk was visited. Dudhauri Municipality in Sindhuli included visits to Dakaya, Pokhare, Khiryani, Lakhyani, Lalpur, and Tallo Patringe sites.

3.2 Lessons from Field Studies

During the Sindhuli visit (October 11th-14th), activities included interviews with Hetauda MoUD and Bhumi Aayog officers, surveys at Dudhauri Municipality, and engagements with Sindhuli MoUD officials. The Chitwan visit (September 29th-October 1st) involved surveys and officer interviews at Ichchhakamana Rural Municipality and Rapti Municipality, totaling 76 interviews. In Chitwan, owner-driven construction led to challenges like budget shortages causing delays and incomplete structures lacking essentials. Low-quality materials and a lack of skilled workers led to errors. Target selection discrepancies were noted.

Box 3

Khem Chepang, DUDBC Hetauda Division Engineer

To optimize the housing program's impact, consider instituting biannual construction training. Collaborating closely with Ward Offices can ensure fund oversight, while cross-referencing beneficiaries with Census data enhances transparency. Prioritizing beneficiary allocation based on poverty levels could streamline assistance distribution. However, challenges persist. The selection process lacks transparency due to incomplete beneficiary lists from Wards. Additionally, late budget allocation leaves less than two months for beneficiary selection, impacting the process efficiency. Addressing these issues could significantly improve the program's efficacy and reach.

Collaboration with Ekikrit Basti (Integrated settlement) Program facilitated road construction. Contrasting Chitwan, beneficiaries did not contribute financially, and all houses were completed. Different financial arrangements and construction methods were observed. Land ownership significantly impacted program participation, excluding some families. Inclusivity, health awareness, and tailored design guidelines were emphasized by officials. Similarly, Arjun Chepang, Ward 12 Chairman of Rapti Municipality, suggested facilitating easier access to citizenship and Ailani Jagga Certificates from Wards and Municipalities for the landless. This aims to enable their participation in the program.

Box 4

Durga Prasad Ghimire, Chief of MoUD, Sindhuli

To enhance housing programs' inclusivity, consider integrating detailed processes and allocating additional budget within the Karyabidhi for vulnerable groups like underage children, special needs individuals, female-headed households, and the elderly. Introducing a Contractor system through MoUD request notices can aid households lacking construction capacity. Offering tax exemptions on materials for beneficiaries could improve affordability, while integrating socio-economic enhancement programs within housing initiatives can drive holistic development. Extending housing opportunities to displaced and low-income populations beyond marginalized communities would foster a more comprehensive and equitable approach to housing initiatives.

Figure 11 Earthquake damaged house of Danuwar Rai who could not participate in PHP

3.3 Housing Design

The Janta Awaas Program in Nepal is a housing initiative that prioritizes sustainability and community empowerment. It highlights the use of local materials and technology, promoting affordability and resource efficiency. The program engages local manpower, generating employment opportunities and nurturing a sense of ownership among beneficiaries. By emphasizing skills development and the 'Afno Ghar Afai Banaune' concept, individuals actively participate in constructing their homes, fostering greater community involvement. Moreover, the program acknowledges the importance

'Afno Ghar Afai Banaune'

Amalgamate owner driven construction, local resources, community involvement & sustainable construction practices.

of adapting construction practices to the site's geography for structural resilience and environmental harmony. Overall, Janta Awaas aims to tackle housing challenges by amalgamating local resources, community involvement, and sustainable construction practices.

Terai Region

The housing design for the Terai Region comprises a compact structure covering 300 sq. ft., measuring 22'x15'x8'9". It features two rooms and a 4'9" kitchen area, with a foundation constructed using locally available bricks measuring 3'x3'x2'6". The design employs a gable roof, known for its adaptability in various climates. Tailored to the regional context, this design maximizes space, utilizes local resources, and accounts for the Terai Region's specific needs and environmental conditions.

Figure 13 House Plan for Terai Region

Inner Madhesh, Hills, and Mountain Region

The housing design for the Inner Madhesh, Hills, and Mountain Region consists of a 300 sq. ft. structure measuring 22'x15'x13'6". With two rooms and a foundation built from mud and stone (2'6"x2'6"x2'6"), the design prioritizes earthquake resistance, addressing the seismic activity prevalent in these areas. This adaptation ensures stability and resilience in the face of earthquakes, aligning with the local terrain and seismic conditions for enhanced safety.

Figure 12 House Plan for Inner Madhesh, Hills and Mountain Region

While the Janta Awaas House covers 330 sq. ft., the Living Standard Survey reports an average dwelling size of 600 sq. ft., doubling the provided housing size.

In 2074, the budget for each house unit was Rs.3,50,000, rising to Rs.4,00,000 for houses without road access. The beneficiary is required to open a joint bank account with a construction committee member.

Transactions occur in four installments, aligning with specific construction milestones for phased disbursement of funds.

Table 4 Installation Payment Details

INSTALLMENT	PERCENTAGE OF SUM RECEIVED (%)	WORK COMPLETED
First	25	Excavation of Foundation
Second	30	Construction of Plinth (dpc)
Third	35	Wall Construction
Fourth	10	Roof and Windows Installment

Majority, surpassing 60%, expressed dissatisfaction with the provided housing size.

While approximately 40% acknowledged satisfactory construction standards, opinions varied considerably.

Responses on safety and durability were mixed, with around 30% feeling secure, while a similar percentage expressed doubts or remained neutral.

Notably, a substantial portion strongly agreed that the housing notably enhanced their overall quality of life.

3.3.1 Housing Design and Construction-Beneficiaries' Perceptions

The satisfaction survey conducted using a five-point Likert scale among 46 households across three studied areas — Rapti Municipality, Ichchhakamana Rural Municipality in Chitwan, and Dudhuli Municipality in Sindhuli — sheds light on the housing program's performance, revealing diverse opinions highlighting areas for improvement and persistent challenges. Specifically, concerns were noted regarding adequacy in housing size and satisfaction with construction quality. The majority, surpassing 60%, expressed dissatisfaction with the provided housing size, indicating a significant gap in meeting their family needs. While approximately 40% acknowledged satisfactory construction standards, opinions varied considerably. Responses on safety and durability were mixed, with around 30% feeling secure, while a similar percentage expressed doubts or remained neutral. Positive feedback emerged regarding easy access to amenities, acknowledged by over 50% for basics like water and electricity. However, perspectives on affordability and housing design varied widely among respondents. Notably, a substantial portion strongly agreed that the housing notably enhanced their overall quality of life. These findings highlight both positive aspects and persistent challenges, offering

crucial insights for refining the program to better cater to beneficiaries' diverse needs and perceptions. In Chitwan Municipality, around 85% of respondents expressed dissatisfaction with thermal comfort, while 59% were discontent with the building materials used, particularly citing CGI sheets and cement blocks in roofs and walls, respectively.

Figure 14 Major Dissatisfaction (Environment Comfort)

Figure 15 Owner driven House construction

Although the district's general temperature spans from a maximum of 35.5°C in May to a minimum of 9.7°C in January, a seven-day field measurement of summer temperatures in a studied building revealed significant fluctuations. Indoors, temperatures peaked at 33.9°C at 3 P.M. and dropped to 27.3°C at 5 A.M. Outdoors, temperatures ranged from a high of 31.3°C at 1 P.M. to a low of 25.9°C at 5 A.M. These observed temperature variations between indoor and outdoor settings can largely be attributed to the choice of CGI sheets and cement blocks as primary building materials.

Figure 16 Temperature Variation

Figure 17 Temperature Variation (Field Measurements)

The beneficiary perceptions regarding housing design and construction revealed varying satisfaction levels and importance across different criteria. Examining mean satisfaction scores and Relative Importance Index (RII) highlighted varying degrees of satisfaction and importance among beneficiaries.

Adequacy of housing size achieved moderate satisfaction (2.49) and relatively lower importance (RII 0.50). Quality of construction showed slightly higher satisfaction (2.53) with moderate importance (RII 0.51).

Affordability of housing demonstrated higher satisfaction (2.79) and relatively more significant importance (RII 0.56). Housing safety and durability obtained notably higher satisfaction (2.92) and importance (RII 0.58). Access to basic amenities had moderate satisfaction (2.38) but lower importance (RII 0.48). Quality of life scored high in both satisfaction (3.72) and importance (RII 0.74). Housing design and layout reflected moderate satisfaction (2.47) and lower relative importance (RII 0.49). These varying perceptions provide insights to improve housing programs and meet beneficiary needs for enhanced satisfaction with housing design and construction.

Figure 18 Beneficiary: Mean Satisfaction Score and RII

3.3.2 Satisfaction with Beneficiary Selection Process-Institutional Stakeholders Perceptions

The mean satisfaction scores indicate beneficiary perceptions across various criteria of the People's Housing Program. The criteria used for identifying the target class received a moderate satisfaction score of 3.43, suggesting some relevance but with room for improvement. Transparency and fairness in the beneficiary selection process garnered a score of 3.64, reflecting a relatively positive perception. However, the current program implementation meeting the needs of the target class received a lower score of 2.29, indicating potential gaps. Efficient utilization of financial resources scored 3.64, showcasing a moderately satisfactory perception. The program's effectiveness in addressing challenges related to land ownership received a high score of 4.00, indicating strong satisfaction. Similarly, awareness creation among the target class and the wider community received a notable score of 4.07, indicating significant success. Disaster risk mitigation

measures scored 3.64, indicating moderate satisfaction. The program's social inclusivity and discrimination reduction scored 3.71, reflecting a positive perception. Overall, satisfaction with the program's effectiveness and impact garnered a score of 3.86, suggesting a generally favorable view, yet with areas for potential enhancement.

Figure 19 Mean Satisfaction Score (Institutional Stakeholders)

3.3.3 Relative Importance of Beneficiary Selection: Institutional Stakeholders Perceptions

The RII, based on Likert scale measurements across study areas, also provided insights into the relative importance of beneficiary selection criteria as perceived by institutional stakeholders. Among these criteria, certain factors stand out significantly in terms of their perceived importance. Female-headed households and vulnerable population status hold the highest relative importance, scoring 1 on the RII scale, signifying the utmost significance attributed to these categories in the program. Dependents with special needs, earthquake-resistant homes, lack of adequate housing, and marginalized community membership follow closely, all scoring above 0.9 on the RII scale, indicating their substantial importance in the institutional stakeholders' evaluation. Citizenship or residency status also holds notable importance with an RII of 0.96, emphasizing the significance of legal status in accessing housing benefits. Meanwhile, evidence of land tax

payment, proof of employment status, and tenancy status show moderate importance, scoring between 0.47 to 0.66 on the RII scale, suggesting a balanced consideration for these factors. User's fee payment holds relatively lower importance among the perspectives of institutional stakeholders, scoring 0.37 on the RII scale.

Figure 20 Relative Importance Index (Institutional Stakeholders)

Construction in Disaster-Prone Areas:

The requirement for beneficiaries to build only on owned land leads to construction in disaster-prone zones, risking occupants' safety during calamities. Balancing safety and housing needs in such zones poses a significant challenge.

Financing and Installments:

The staged financing structure creates financial burdens for economically disadvantaged families, forcing upfront financing. Legal and banking complexities further hinder underage and elderly beneficiaries.

Lack of Energy Efficiency:

Predesigned housing models lack consideration for Nepal's varied climates, resulting in inefficiencies in energy usage. Constructed without locally available materials, these overlook long-term environmental impacts.

Limited Livelihood Opportunities:

Families targeted by the program lack income sources alongside housing. Self-construction, aimed at fostering ownership, poses challenges for families dependent on daily wages for sustenance.

Coordination between Government Levels:

Inadequate coordination between federal, provincial, and local governments hampers the program's effective functioning, affecting beneficiary selection and budget utilization.

Construction and Design Issues:

Problems like water leakage due to inadequate roofing, damages in metal columns, and inadequacies in housing models, like low-level plinths and unusable kitchen areas, pose significant challenges.

CHAPTER 4: PROPOSED PHP FRAMEWORK FOR DEPRIVED POPULATION

CHAPTER 4: PROPOSED PHP FRAMEWORK FOR DEPRIVED POPULATION

The identical adoption of Janata Awas Karyakram Namuna Karyabidhi-2075 across Lumbini, Sudur Paschim, and Karnali Provinces, with some contextualization in case of Karnali Province's, has inadvertently led to the exclusion of deprived populations, primarily those falling under poverty criteria. While the program targets marginalized communities, its stringent eligibility criteria centered on land ownership inadvertently overlooks a significant portion residing in 'Ailani Jagga' or 'Parti Jagga', thereby excluding them from the program. This exclusion poses economic challenges and disregards the specific housing needs of these populations. Even when tailored for targeted class beneficiaries, the program's implementation has encountered several challenges as outlined in previous section.

4.1 Rationale for Inclusive Beneficiary Criteria

The process of identifying eligible beneficiaries for housing schemes is critical for effective program implementation. Nepal, facing challenges in this aspect, can draw insights from Andhra Pradesh's Integrated Novel Development in Rural Areas and Model Municipal Areas scheme, emphasizing multidimensional poverty measures and poverty dynamics analysis to ensure accurate targeting of marginalized communities. Additionally, addressing the plight of the landless and displaced requires innovative strategies like land regularization, provision of alternative land, or additional grants, aligning with Nepal's Geo-hazard Prone Settlement Relocation and Rehabilitation Procedure. Collaboration with Nepal Land Commission becomes pivotal in executing these strategies effectively. Moreover, empowering women-headed households demands tailored support mechanisms, akin to the additional grant assistance and revolving funds proposed in post-earthquake reconstruction efforts, echoed in initiatives from other countries like Malawi's Rural Housing Programme and Odisha State Government's interventions. Financial sustainability, another pressing concern, can be tackled through subsidy mechanisms and collaboration with financial institutions, a strategy found successful in Andhra Pradesh's INDIRAMMA Housing Scheme.

To address employment generation and cost overrun challenges, Nepal can adopt innovative models seen in Malawi and Odisha, involving beneficiaries in labor work and collaboration with vocational training institutions like CTEVT. Encouraging people's participation necessitates robust partnerships between local authorities, community groups, and government bodies, as witnessed in Namibia's Shack Dwellers Federation and the coordinated efforts suggested in Nepal involving various community groups and local authorities. Finally, ensuring quality achievement and meeting users' needs demand technical partnerships, disaster-resilient housing designs, and local context-based models, exemplified in practices adopted by Central Building Research Institute and Odisha's housing schemes. The province can strengthen its processes by establishing collaborations, employing innovative financing mechanisms like revolving funds, and focusing on institution-building efforts drawn from successful models in other regions. Through these strategic adaptations and collaborations, Nepal can navigate and mitigate the multifaceted challenges encountered in housing scheme implementation.

4.2 Inclusive Criteria for PHP: A Proposed Framework

The current Peoples Housing Program (PHP) in Nepal lacks inclusivity in identifying target beneficiaries, primarily focusing on marginalized groups to include all 13 districts and 119 palikas in the Bagmati Province. To address this, a proposed multifaceted selection process across ten poverty dimensions aims to encompass all individuals in need, using various data sources for a holistic evaluation. Additionally, the beneficiary selection criteria for the PHP emphasize a multifaceted assessment, considering socio-economic dimensions and specific household compositions. These criteria, including income, education, employment, healthcare,

social support, and more, use distinct scoring methods derived from diverse data sources to ensure a comprehensive evaluation of beneficiaries' needs.

4.2.1 Inclusive Target Class Identification Criteria

The current identification process within Nepal's Peoples Housing Program (PHP) reveals shortcomings in inclusivity, primarily limited to marginalized groups. To counter this, the study proposes a more inclusive target identification criteria, transcending specialized status and encompassing all sections in dire need of housing. This departure from the existing PHP framework, initially established by the federal government and adopted by provinces, aims to address its limitations by proposing a multifaceted selection process based on measurable indicators across ten poverty dimensions. These dimensions encompass various crucial aspects such as income, education, employment, healthcare access, social support, vulnerability factors, food security, living standards, rural livelihood, and risk assessment. Each dimension is assigned a specific weightage to effectively evaluate the inclusivity of the target class. Employing distinct scales for measurement, the scoring method enables the assessment of households using predefined indicators drawn from diverse sources like household records, educational databases, healthcare statistics, and vulnerability assessments. This holistic approach intends to comprehensively understand beneficiaries' needs, accommodate their diverse vulnerabilities, and establish a more inclusive selection process within the PHP. The following criteria is proposed.

Table 5 Inclusive Target Identification Criteria

S. N	Poverty Dimension	Measurable Indicators	Weight (Max Score)	Scoring Method	Sample Scoring Scale	Data Sources
1	Income	- Annual household income	15	Percentage of income compared to poverty threshold	0-5: Above poverty line 6-10: Moderately below 11-15: Below poverty line	Household income records, government data
2	Education	- Level of education attained	10	Education level or literacy rate	0-3: High education/literacy 4-7: Moderate education/literacy 8-10: Low education/literacy	Educational records, literacy surveys
3	Employment	- Employment status and stability	10	Employment status, income stability	0-3: Stable employment and good income 4-7: Moderate income and	Employment records, job data

S. N	Poverty Dimension	Measurable Indicators	Weight (Max Score)	Scoring Method	Sample Scoring Scale	Data Sources
					stability 8-10: Unemployed or very low income	
4	Healthcare Access	- Access to healthcare services	5	Level of access to healthcare facilities	0-2: Good access and coverage 3-4: Partial access or limited coverage 5: Limited access or no insurance	Healthcare records, health insurance data
5	Social Support	- Presence of social support networks	5	Extent of social support networks	0-2: Strong social support 3-4: Limited support network 5: Isolated, lack of support	Social survey data, community engagement records
6	Vulnerability Factors	- Disaster vulnerability, housing condition	10	Vulnerability to natural disasters, housing condition	0-3: Low vulnerability 4-5: Moderate vulnerability 6-10: High vulnerability	Housing vulnerability assessment, disaster risk reports
7	Food Security	- Food insecurity, child malnutrition	10	Food insecurity rate, prevalence of child malnutrition	0-3: Food secure, low malnutrition rate 4-7: Moderate food insecurity, moderate malnutrition rate 8-10: Severe food insecurity, high malnutrition rate	Household food surveys, health records

S. N	Poverty Dimension	Measurable Indicators	Weight (Max Score)	Scoring Method	Sample Scoring Scale	Data Sources
8	Living Standards	- Cooking fuel, improved sanitation, drinking water, electricity, housing condition, asset ownership indicators	15	Types of cooking fuel, sanitation facilities, water source, electricity access, housing conditions, asset ownership	0-5: Good living standards 6-10: Moderate living standards 11-15: Poor living standards	Household surveys, infrastructure records
9	Rural Livelihood	- Agriculture assets adequacy, low pay rate, social protection, child labor	10	Agricultural assets, wage levels, social protection access, child labor prevalence	0-3: Adequate resources, fair pay, good social protection, low child labor 4-7: Moderate resources, moderate pay, limited social protection, moderate child labor 8-10: Inadequate resources, very low pay, no social protection, high child labor	Agricultural census, labor surveys
10	Risk Assessment	- Credit denial, risk exposure, coping capacity, risk of climate change	10	Credit access denial, risk exposure levels, coping abilities, climate change vulnerability	0-3: Low denial, low risk exposure, high coping capacity, low climate change risk 4-7: Moderate denial, moderate risk exposure, moderate coping capacity, moderate climate change risk 8-10: High denial, high risk exposure, low coping capacity, high climate change risk	Financial institution data, risk assessments, climate change reports
		Total	100			

4.2.2 Inclusive Beneficiary Selection Criteria

The selection of beneficiaries within any housing program demands a robust and comprehensive approach, one that considers diverse socio-economic dimensions and individual circumstances. In this context, the proposed beneficiary selection criteria for the Peoples Housing Program (PHP) in Nepal emphasizes a multifaceted evaluation. These criteria encompass various vital aspects including income levels, asset ownership, education, employment status, healthcare access, social support networks, and specific household compositions like single women or disabled individuals. The weightage allocated to each criterion signifies its relative significance in the assessment process. Employing distinct scoring methods and scales, derived from household records, educational databases, healthcare statistics, and housing vulnerability assessments, this holistic approach ensures a thorough evaluation. Each criterion, ranging from income levels to the physical condition of the dwelling, plays a pivotal role in assessing the overall eligibility of beneficiaries, ultimately contributing to the creation of a more inclusive and tailored housing assistance program within the PHP.

Table 6 Beneficiary Selection Criteria

S. N	Criteria	Measurable Indicators	Weight (Max Score)	Scoring Method	Sample Scoring Scale	Data Sources
1	Income Level	15	Percentage of income compared to the poverty line	0-7: Above poverty line 8-11: Moderately below line 12-15: Below poverty line	Household income records, government data	Household income records, government data
2	Asset Ownership	10	Presence or absence of property ownership	0: Owns significant property 10: No property ownership	Property ownership records, asset data	Property ownership records, asset data
3	Education Level	10	Education level or literacy rate	0-4: High education/literacy 5-7: Moderate education/literacy 8-10: Low education/literacy	Educational records, literacy surveys	Educational records, literacy surveys

S. N	Criteria	Measurable Indicators	Weight (Max Score)	Scoring Method	Sample Scoring Scale	Data Sources
4	Employment Status	10	Employment stability, status, and income level	0-3: Stable employment and good income 4-7: Moderate income and stability 8-10: Unemployed or very low income	Employment records, job data	Employment records, job data
5	Healthcare Access	10	Access to healthcare facilities, health insurance coverage	0-3: Good access and coverage 4-6: Partial access or limited coverage 7-10: Limited access or no insurance	Healthcare records, health insurance data	Healthcare records, health insurance data
6	Social Support	10	Presence or absence of social support networks	0-3: Strong social support 4-6: Limited support network 7-10: Isolated, lack of support	Social survey data, community engagement records	Social survey data, community engagement records
7	Single Women HH	7	Presence of single women heading households	0: Absence of single women as heads 7: Presence of single women as heads	Household composition data, gender-disaggregated records	Household composition data, gender-disaggregated records
8	Disabled HH	7	Presence of disabled individuals within households	0: Absence of disabled individuals 7: Presence of disabled individuals	Disability records, household disability data	Disability records, household disability data
9	Lack of Land Ownership	5	Absence of land ownership	0: No land ownership 5: Owns land	Land ownership records	Land ownership records
10	Limited Valuable Assets	5	Lack of significant valuable assets	0: Owns significant assets 5: Lack of valuable assets	Asset inventory records	Asset inventory records

S. N	Criteria	Measurable Indicators	Weight (Max Score)	Scoring Method	Sample Scoring Scale	Data Sources
11	Disaster Vulnerability of Existing House	8	Vulnerability of the current dwelling to natural disasters	0-3: Low vulnerability 4-5: Moderate vulnerability 6-8: High vulnerability	Housing vulnerability assessment, disaster risk reports	Housing vulnerability assessment, disaster risk reports
12	Physical Status of the House	8	Condition and adequacy of the current dwelling	0-3: Good condition, adequately maintained 4-5: Fair condition, somewhat adequate 6-8: Poor condition, inadequate	Housing assessment reports, inspection records	Housing assessment reports, inspection records
		Total	100	Aggregate score of all criteria		

4.3 Implementation Plan of Action

The action plan is designed to advance provincial initiatives within the People's Housing Program by promoting inclusivity and efficiency. As outlined in the provided Table 7, the plan encompasses a pilot project with a specific focus on inclusive target identification and beneficiary selection processes aimed at overcoming current limitations. Concurrently, a provincial strategic framework aligns policies with the national urban agenda, stressing collaboration and policy development. Scaling the People's Housing Program involves conducting surveys, spatial planning analyses, and formulating an inclusive housing policy. Integration of disaster risk reduction and livelihood strategies enhances sustainability.

Furthermore, the plan delineates the Integrated Settlement Policy, concentrating on relocation strategies and establishing financial frameworks for urban planning. Ongoing efforts in capacity-building prioritize skill enhancement, employment generation, and solutions for material procurement. By uniting departments, development partners, academia, and local bodies, this comprehensive plan aspires to revolutionize Nepal's housing sector, establishing an inclusive, sustainable, and robust framework for urban housing development.

Table 7 Action Plan for PHP

Action Plan	Tasks	Timeline (months)	Responsible Department/Agency	Resources Needed	Collaboration Opportunity
1. Initiate Pilot Project	Select pilot project site/area	0.5	Urban Development Department	Mapping tools, site analysis resources	Municipality for site access and beneficiary data; Development partners (e.g. CRS) for implementation support; Academia (e.g. IOE) for research support, and knowledge sharing; Impact evaluation and improvement recommendations
	Apply target identification criteria	1	Housing Development Board	Criteria assessment tools, data collection	
	Apply beneficiary selection criteria	1	Housing Development Board	Selection criteria tools, stakeholder input	
	Initiate the program	9.5	Housing Development Board	Project implementation resources, staff	
	Learn lessons and gather feedback		Project Monitoring Team	Surveys, assessment tools, feedback forms	
	Provide inputs to inclusive working procedures		Policy Development Division	Feedback reports, policy drafting resources	
2. Provincial Strategic Framework for Implementing	Drafting the framework document	1-3	Provincial Urban Development Department	Urban planners, policy experts, stakeholders	Development partners for policy review and stakeholder consultations

Action Plan	Tasks	Timeline (months)	Responsible Department/Agency	Resources Needed	Collaboration Opportunity
National Urban Policy	Consultations with stakeholders and experts	4-6	Provincial Urban Development Department	Meetings, workshops, data collection	
	Review and finalization of the framework	7-9	Provincial Urban Development Department	Expert reviews, policy analysis	
	Submission and approval of the framework	10	Provincial Government/Ministry	Approval process, policy endorsement	
3. People's Housing Program Identification for Scaling up the program	Survey and identification of housing needs	1-6	Housing Development Board	Survey tools, data collection infrastructure	Municipality for housing needs data collection and coordination
	Analysis of spatial planning indicators	4-8	Urban Planning Department	GIS tools, spatial data analysis	
	Design and proposal of the housing program	7-10	Housing Development Board	Architectural designs, proposal documents	
4. Separate Inclusive "People's Housing Policy" Creation	Formulation of policy guidelines	2-6	Policy Development Division	Policy experts, legal consultants	Municipality for policy alignment and implementation
	Stakeholder consultations and feedback	7-9	Housing Development Board	Meetings, feedback sessions	
	Finalization and submission of the policy	10-12	Housing Development Board	Policy drafting, approval procedures	

Action Plan	Tasks	Timeline (months)	Responsible Department/Agency	Resources Needed	Collaboration Opportunity
5. Disaster Risk Reduction and Livelihood Integration Measures	Risk assessment and identification	1-4	Disaster Management Agency	Risk assessment tools, data collection	Development partners for implementation and expertise exchange; Academia for research and impact evaluation
	Livelihood integration strategies formulation	5-8	Livelihood Development Division	Economic analysis, livelihood programs	
	Integration with WASH and Energy Efficiency	9-12	Infrastructure Development Department	Integration plans, resource allocation	
6. Integrated Settlement Policy and Procedures	Planning criteria for relocation and development	2-6	Urban Planning Department	Urban design principles, stakeholder input	Academia for training program evaluation and improvement
	Integrated settlement development strategies	7-9	Settlement Development Board	Development plans, stakeholder engagement	Development partners for employment generation and financial support
	Financial and implementation strategies	10-12	Finance and Budget Department	Budget allocation, implementation plans	Municipality for community engagement and resource allocation
7. Capacity Building and Support (Ongoing)	Provide construction training to beneficiaries	Ongoing	Housing Development Board	Training resources, instructional materials	Development partners for material sourcing and logistics support
	Provide employment contracts to laborers (e.g., Cash for Work)	Ongoing	Labor and Employment Division	Contract templates, financial resources	Municipality for local employment initiatives and collaboration
	Support self-help labor	Ongoing	Community Support Division	Support programs, guidance	Development partners for financial management and disbursement

Action Plan	Tasks	Timeline (months)	Responsible Department/Agency	Resources Needed	Collaboration Opportunity
	efforts by families				
	Address difficulties in procuring materials	Ongoing	Procurement and Supply Division	Supply chain improvements, supplier engagement	
	Facilitate recruitment of construction workers	Ongoing	Labor and Employment Division	Recruitment strategies, job fairs	
	Ensure timely installment distribution	Ongoing	Finance and Budget Department	Payment systems, budget allocation	

CHAPTER 5: CONCLUSION

Based upon this comprehensive study, it can be concluded the PHP program in Nepal, while targeting marginalized communities, inadvertently excludes significant segments due to stringent criteria. To enhance inclusivity, Nepal can draw insights from successful models like Andhra Pradesh's poverty measures and strategies for empowering marginalized groups. Innovative approaches such as land regularization, alternative land provisions, and partnerships with the Nepal Land Commission could address exclusions. Additionally, strategies from Malawi and Odisha can aid in employment generation and cost control. Collaborations with local authorities, community groups, and technical institutions would ensure sustainable and quality housing. Furthermore, the proposed multifaceted selection process for the PHP emphasizes inclusivity across various socio-economic dimensions, aiming to create a more tailored and inclusive housing assistance program.

APPENDICES

Appendix-1: Example of Poverty Assessment as Target Selection Criteria

DIMENSIONS	INDICATORS	WEIGHTS
Food security and nutrition	Food insecurity	(1/10)
Education	Child malnutrition	(1/10)
	Years of schooling	(1/10)
	School attendance	(1/10)
Living Standards	Cooking fuel	(1/30)
	Improved sanitation	(1/30)
	Drinking water	(1/30)
	Electricity	(1/30)
	Housing	(1/30)
	Assets	(1/30)
Rural Livelihood and Resources	Agricultural assets adequacy	(1/25)
	Low pay rate	(1/25)
	Social protection	(1/25)
	Child labour	(1/25)
	Extension services	(1/25)
Risk	Credit denial	(1/20)
	Risk exposure and coping strategies	(3/40)
	Risk of climate shocks	(3/40)

(FAO, 2021)

Appendix-2: Field Work Findings from Qualitative Interviews

Addressing Local Challenges	Enhancing Efficiency and Oversight
- Address local challenges - Resolve political disputes hindering program implementation.	- Mitigate middlemen taking a cut from beneficiary installments - Establish field offices for better supervision. - Facilitate data sharing with DUDBC supervision officers. - Review and update Karyabidhi policies as needed. - Collaborate with ward offices for oversight.
Selection Process and Criteria	Capacity Building and Support
- Promote interdepartmental coordination for program efficiency. - Establish transparent beneficiary selection processes. - Base beneficiary selection on poverty levels, not the total population. - Verify the beneficiary list with census data. - Include marginalized community members in decision-making. - Extend program benefits based on social and economic criteria.	- Provide construction training to beneficiaries. - Provide employment contracts to laborers. - Support self-help labor efforts by families. - Address difficulties in procuring materials. - Facilitate recruitment of construction workers. - Ensure timely installment distribution.
Financial and Resource Management	Community Engagement and Awareness
- Ensure timely budget allocation - Implement measures to prevent misuse of installment funds.	- Conduct awareness campaigns to inform communities. - Promote awareness of legal document requirements. - Educate beneficiaries about program requirements.
Program Sustainability and Quality	
- Enhance DUDBC supervision and awareness. - Implement measures to address temperature-related issues.	

Appendix-2 (a): Field Tools: Checklists

A. Demographic Details	
- General Information: - Name of the beneficiary - Date of assessment - Address of the household	
B. House Assessment and Condition	
House Area per Person:	Land Area per Person:
- Less than 30 sq ft 30 to 60 sq ft - Greater than 60 sq ft	- Less than 60 sq ft 60 to 100 sq ft - Greater than 100 sq ft
Flooring inside the House:	Wall of the House
- Mud - Brick, Stone, etc. - Cement	- Bamboo, Half Bamboo, etc. - Random stone masonry wall, Bamboo, etc. - Stone masonry and burned brick, etc.
Roof of the House	Generally 10 Number of Houses in the Settlement
- Thatch, Asbestos, etc. - Khapada, Tyre, Tin - RCC, CGI sheet	- Yes - No - Exception for Dom, marginalized, endangered groups
Gender of Household Head	Poverty Status of the Household
- Female - Male	- Poor - Non-Poor
Access to Energy	Disaster Risk
- No access - Limited access - Full access	- High risk - Low to medium risk - Minimal risk
Land Ownership	Agricultural Land (Owned or Do Not Have)

- | | |
|---|--|
| <ul style="list-style-type: none"> ▪ Own land ▪ Do not own land | <ul style="list-style-type: none"> ▪ Own agricultural land ▪ Do not have agricultural land |
|---|--|

Appendix-2 (b): Additional Checklists

The additional checklists are intended to gather more specific information about the household and the overall context, helping to assess the suitability and eligibility of beneficiaries for the People's Housing Program. Field assessors can use these checklists alongside the main assessment tool to obtain a comprehensive understanding of the housing needs and vulnerabilities of potential beneficiaries.

BENEFICIARY ELIGIBILITY	DETAILS
House Structure and Condition	Presence of cracks or damages in walls
	Condition of the roof (leakages, damages)
	Condition of doors and windows (functionality, damages)
	Overall structural integrity and safety of the house
Household Income and Affordability	Monthly household income (in local currency)
	Ability to afford housing expenses
	Monthly expenditure on rent or housing-related costs
	Monthly household income (in local currency)
Health and Sanitation	Availability of clean drinking water
	Access to proper sanitation facilities (toilet, bathroom)
	Presence of health hazards (e.g., asbestos roofing)
Vulnerable Populations	Elderly or disabled members in the household
	Female-headed households
	Households with orphaned or vulnerable children
Social and Community Support	Participation in community activities or groups
	Involvement in local development initiatives
	Support from local community and neighbors

Employment and Livelihood	Employment status of household members
	Source of livelihood and income generation
	Possession of agricultural land or farming activities
Special Needs or Disabilities	Presence of members with special needs or disabilities
	Accessibility features in the house (ramps, handrails)
Disaster Preparedness	Awareness of disaster risks and safety measures
	Proximity to hazard-prone areas (flood, landslide, etc.)
Energy Efficiency and Environmental Sustainability	Use of renewable energy sources (solar panels, biogas, etc.)
	Waste management practices in the household
Overall Priority for Housing Assistance	High priority based on cumulative assessment
	Medium priority based on cumulative assessment
	Low priority based on cumulative assessment

Appendix-2 (c): Beneficiary Interview Questions (Open-ended)

Name of Beneficiary: _____ Date: _____

House and Family Size:

- How many people live in your house?
- Can you describe the size of your house (small, medium, large)?

Land Use:

- How much land do you use for your household activities? (show with hands)
- Do you use the land for farming or other purposes? (yes/no)

House Flooring:

- What materials are used for the floor inside your house? (mud, stones, cement, etc.)

House Walls:

- What materials were used to build the walls of your house? (bamboo, stones, bricks, etc.)

Roof Type:

- What is the roofing material used for your house? (thatch, tin, concrete, etc.)

Settlement Size:

- How many houses are there in your neighborhood? (few, many, don't know)
- Do you think there are enough houses for everyone in your community? (yes/no)

Household Head:

- Who is the head of your household? (name or relationship)
- Is the head of your household a man or a woman? (man/woman)

Financial Situation:

- How would you describe your family's financial situation? (struggling, okay, good)

Water and Sanitation:

- Do you have clean drinking water at home? (yes/no)
- Do you have proper toilets and bathrooms? (yes/no)

Vulnerable Members:

- Are there any elderly or disabled people in your family? (yes/no)
- Are there any children without parents or with special needs? (yes/no)

Community Support:

- Do you participate in community activities? (yes/no)
- Do you receive support from your neighbors or community members? (yes/no)

Livelihood:

- How does your family earn a living? (farming, daily wages, others)

Disaster Experience:

- Have you experienced any natural disasters like floods or earthquakes in your area?(yes/no)
- Did it cause any damage to your house? (yes/no)

Social Discrimination:

- Do you or anyone in your family face social discrimination or exclusion? (yes/no)
- If yes, please describe the situation briefly.

Affordability:

- Is it difficult for you to afford housing-related expenses? (yes/no)
- What are the main challenges you face in meeting these expenses?

Land Ownership:

- Do you own the land where your house is built? (yes/no)
- If no, do you face any problems related to land ownership?

Program Awareness and Opinion:

- Have you heard about the People's Housing Program before? (yes/no)
- What do you think about the program? (open-ended)

Focus Group Discussion Plan for Institutional Stakeholders

Objective: The focus group discussion aims to gather insights and feedback from institutional stakeholders involved in the People's Housing Program to identify challenges and explore potential improvements in target class identification, beneficiary selection, implementation, and financial aspects.

Participants: Representatives from government agencies, non-governmental organizations, community leaders, and other relevant stakeholders involved in the People's Housing Program.

Duration: Approximately 1.5 to 2 hours.

Facilitator's Name:

Guiding Questions:

- i. Target Class Identification:
 - a. What are the challenges you face in identifying the target class for the People's Housing Program?
 - b. Are the current criteria for target class identification appropriate? If not, what changes would you suggest?
- ii. Beneficiary Selection:
 - a. How do you ensure that the most deserving beneficiaries are selected for the program?
 - b. What measures are in place to address the needs of vulnerable and marginalized populations?
- iii. Implementation:
 - a. What are the main challenges faced during the implementation of the People's Housing Program?
 - b. How can coordination among different stakeholders be improved to enhance the program's effectiveness?
- iv. Financial Aspects:
 - a. Are there any financial challenges in providing safe and affordable housing to the target class?
 - b. How can financial resources be better allocated to maximize the impact of the program?
- v. Land Ownership Issues:
 - a. Do land ownership problems hinder the successful implementation of the program? If yes, how are these challenges being addressed?
 - b. Are there any innovative approaches to address land ownership issues and ensure secure tenure for beneficiaries?
- vi. Awareness and Community Participation:
 - a. How is the program creating awareness among the target class and the wider community?
 - b. What strategies are being used to encourage community participation in the program?
- vii. Disaster Risk Mitigation:
 - a. How does the program address disaster risk mitigation in the housing construction process?
 - b. Are there any measures to ensure the safety and resilience of housing structures against natural disasters?

viii. Social Inclusivity:

- a. Is the program designed to promote social inclusivity and reduce discrimination? If yes, how is it achieved?
- b. How do you ensure that the program benefits all eligible individuals regardless of their social background?

ix. Improving Program Efficiency:

- a. What suggestions do you have to enhance the overall efficiency and impact of the People's Housing Program?

Satisfaction Survey (Institutional Stakeholders)

- a) The criteria used for identifying the target class in the People's Housing Program are relevant and appropriate.
 1. (Strongly Disagree)
 2. (Disagree)
 3. (Neutral)
 4. (Agree)
 5. (Strongly Agree)
- b) The beneficiary selection process is transparent and fair.
 1. (Strongly Disagree)
 2. (Disagree)
 3. (Neutral)
 4. (Agree)
 5. (Strongly Agree)
- c) The current implementation of the People's Housing Program effectively meets the needs of the target class.
 1. (Strongly Disagree)
 2. (Disagree)
 3. (Neutral)
 4. (Agree)
 5. (Strongly Agree)
- d) The financial resources allocated to the program are utilized efficiently.
 1. (Strongly Disagree)
 2. (Disagree)
 3. (Neutral)
 4. (Agree)

- 5. (Strongly Agree)
- e) The program adequately addresses challenges related to land ownership for beneficiaries.
 - 1. (Strongly Disagree)
 - 2. (Disagree)
 - 3. (Neutral)
 - 4. (Agree)
 - 5. (Strongly Agree)
- f) The People's Housing Program has successfully created awareness among the target class and the wider community.
 - 1. (Strongly Disagree)
 - 2. (Disagree)
 - 3. (Neutral)
 - 4. (Agree)
 - 5. (Strongly Agree)
- g) The program takes sufficient measures to ensure disaster risk mitigation in housing construction.
 - 1. (Strongly Disagree)
 - 2. (Disagree)
 - 3. (Neutral)
 - 4. (Agree)
 - 5. (Strongly Agree)
- h) The People's Housing Program is socially inclusive and reduces discrimination.
 - 1. (Strongly Disagree)
 - 2. (Disagree)
 - 3. (Neutral)
 - 4. (Agree)
 - 5. (Strongly Agree)
- i) Overall, I am satisfied with the effectiveness and impact of the People's Housing Program.
 - 1. (Strongly Disagree)
 - 2. (Disagree)
 - 3. (Neutral)
 - 4. (Agree)
 - 5. (Strongly Agree)

Satisfaction Survey (Beneficiaries)

1. **Adequacy of Housing Size:** The housing size provided under the program meets my family's needs.
 1. (Strongly Disagree)
 2. (Disagree)
 3. (Neutral)
 4. (Agree)
 5. (Strongly Agree)

2. **Quality of Construction:** The construction quality of the housing is satisfactory.
 1. (Strongly Disagree)
 2. (Disagree)
 3. (Neutral)
 4. (Agree)
 5. (Strongly Agree)

3. **Housing Safety and Durability:** I feel safe and secure living in the provided housing.
 1. (Strongly Disagree)
 2. (Disagree)
 3. (Neutral)
 4. (Agree)
 5. (Strongly Agree)

4. **Access to Basic Amenities:** The housing unit has easy access to basic amenities such as water and electricity.
 1. (Strongly Disagree)
 2. (Disagree)
 3. (Neutral)
 4. (Agree)
 5. (Strongly Agree)

5. **Affordability of Housing:** The cost of the housing is affordable for my family's financial situation.
 1. (Strongly Disagree)
 2. (Disagree)
 3. (Neutral)
 4. (Agree)

- 5. (Strongly Agree)
- 6. **Impact on Quality of Life:** The housing provided has improved the overall quality of life for my family.
 - 1. (Strongly Disagree)
 - 2. (Disagree)
 - 3. (Neutral)
 - 4. (Agree)
 - 5. (Strongly Agree)
- 7. **Housing Design and Layout:** The design and layout of the housing are practical and functional.
 - 1. (Strongly Disagree)
 - 2. (Disagree)
 - 3. (Neutral)
 - 4. (Agree)
 - 5. (Strongly Agree)

Appendix-3: International Experience in Target Class Identification and Beneficiary Selection

- a. Singapore - Housing and Development Board (HDB): Target Class Identification: The HDB's target class includes low and middle-income citizens who require affordable housing solutions. Eligibility is based on income levels and citizenship status.

Beneficiary Selection: Beneficiaries are selected based on their income and family size. Priority is given to those with lower income levels and families in need of housing. Applicants must meet specific criteria to qualify for HDB housing.

- b. Brazil - Minha Casa Minha Vida (My House My Life) Program: Target Class Identification: The Minha Casa Minha Vida program targets low-income families who are in need of affordable housing options. The focus is on improving the living conditions of vulnerable populations.

Beneficiary Selection: Beneficiaries are selected through a social needs assessment, considering income levels, family size, and housing conditions. The program prioritizes families living in informal settlements or substandard housing.

- c. South Africa - Breaking New Ground (BNG) Housing Policy: Target Class Identification: The BNG housing policy aims to provide housing solutions for low-income families and previously disadvantaged individuals. The focus is on addressing historical inequalities in housing provision.

Beneficiary Selection: Beneficiaries are identified based on their income, living conditions, and social status. The BNG policy prioritizes those living in informal settlements, overcrowded dwellings, or with inadequate housing.

- d. India - Pradhan Mantri Awas Yojana (PMAY): Target Class Identification: PMAY targets economically weaker sections, lower-income groups, and marginalized communities who lack access to adequate housing. The program aims to provide "Housing for All" by 2022. Beneficiary Selection:

Beneficiaries are selected through a transparent and accountable process based on income, family size, and housing conditions. Preference is given to those without a pucca house or living in kutcha houses.

- e. Sweden - Social Housing Programs: Target Class Identification: Sweden's social housing programs target low and moderate-income households in need of affordable rental housing options. The focus is on promoting social equality and reducing housing segregation.

Beneficiary Selection: Beneficiaries are identified based on their income and housing needs. The government allocates social housing units to eligible applicants based on specific criteria and availability.

- f. Canada - National Housing Strategy: Target Class Identification: Canada's National Housing Strategy aims to address housing affordability and homelessness. It targets vulnerable populations, including low-income families, Indigenous peoples, seniors, and individuals experiencing homelessness.

Beneficiary Selection: Beneficiaries are selected based on their specific housing needs and vulnerability. The strategy provides various housing programs and initiatives to support eligible individuals and families.

Annex-4 : Consultations with Bagmati Province
