1 Introduction

1.1 Background

Oxfam in consortium with People in Need (PIN), Lumanti and CSRC is working together with an objective to assist government in developing and implementing durable solutions for the displaced households. In this context, the consortium proposes to support the government in developing and operating a process for implementing durable solutions for earthquake displaced households. This work will first develop and clarify a stronger understanding and criteria for “displacement” with the purpose of identifying households who have been displaced and legitimately cannot return to their places of origin.

In doing so, the consortium will re-assess and track the severity of displacement. With this knowledge the consortium will implement mitigation activities for severely displaced populations who are at risk of various threats. Then, in full consultation with the government, land rights activists and other stakeholders, the consortium will collaboratively design a household level profiling tool to create a detailed map and database of earthquake displaced populations that can be used to support the government in developing the necessary policies for displacements. The consortium will also use this knowledge to advocate for solutions, ensuring the inclusion of displaced people’s voices and desires throughout the process. Supporting Durable Solutions Project is working to secure one of three durable solutions for the displaced people affected by earthquake – voluntary repatriation (returning), local integration or relocation. In order to achieve aforementioned objectives HH survey of the displaced HHs in camps has been carried out for the eight earthquake affected districts in phase 1: Kathmandu, Lalitpur, Bhaktapur, Dhading, Nuwakot, Rasuwa, Gorkha, and Sindhupalchowk.

1.2 Objectives

The major Objectives of the assignment are as follows:

- Detail Data Analysis of the HH survey data
- Interlink the data of the HH survey and the data from the NRA on geo hazard to come up with the durable solutions results

- Present the data analysis from the HH survey in coordination with the hiring manager and other consortium members

1.3 Scope of the assignment

The scope of the current assignment included analyses of a detailed data collected from people living in temporary shelters in Gorkha, Dhading, Rasuwa, Nuwakot, Kathmandu, Bhaktapur, Lalitpur, and Sindhupalchowk districts. The assignment also required that these households be linked with the dataset of geo-hazard survey of areas affected by 2015 earthquake maintained by Nepal Reconstruction Authority.

Activities will include, but may not be limited to the following:

- Analysis of the HH survey Data that was conducted by the enumerators of the IDPs in the most affected eight districts
- Detail data analysis and representation in creative ways of all the data and produce a printable format
- Preparation of the summarize data
- Presentation of the analysis in the consortium meeting

2 Results

The data analyses show that there are a total of 3063 households living in temporary shelters. This includes a total of 13594 people with 6768 males and 6826 females, out of which 479 have physical disabilities and will require additional support (Figure 1). The location of 83 camps surveyed is presented in Figure 2. The details of the camps are available at <http://durable-solutions.azurewebsites.net/>.

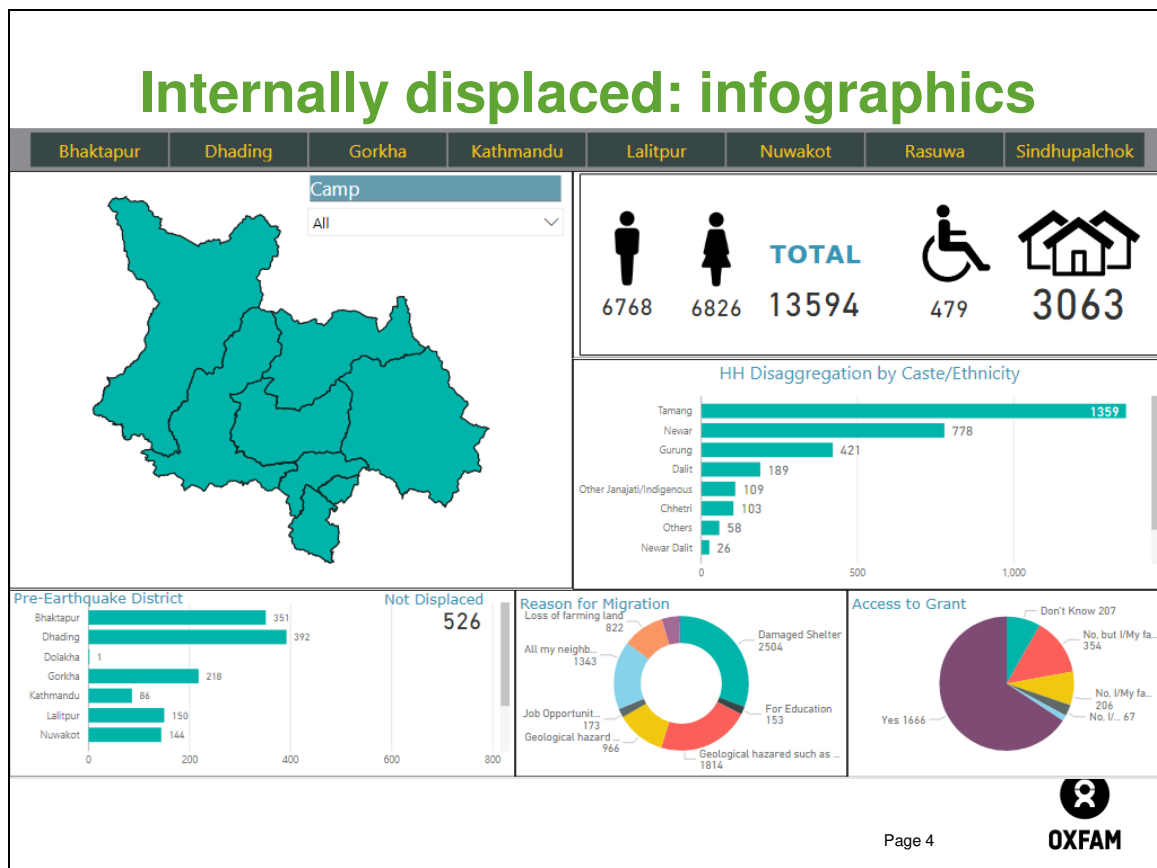

Figure Infographics of the internally displaced people living in camps in 8 most earthquake-affected districts

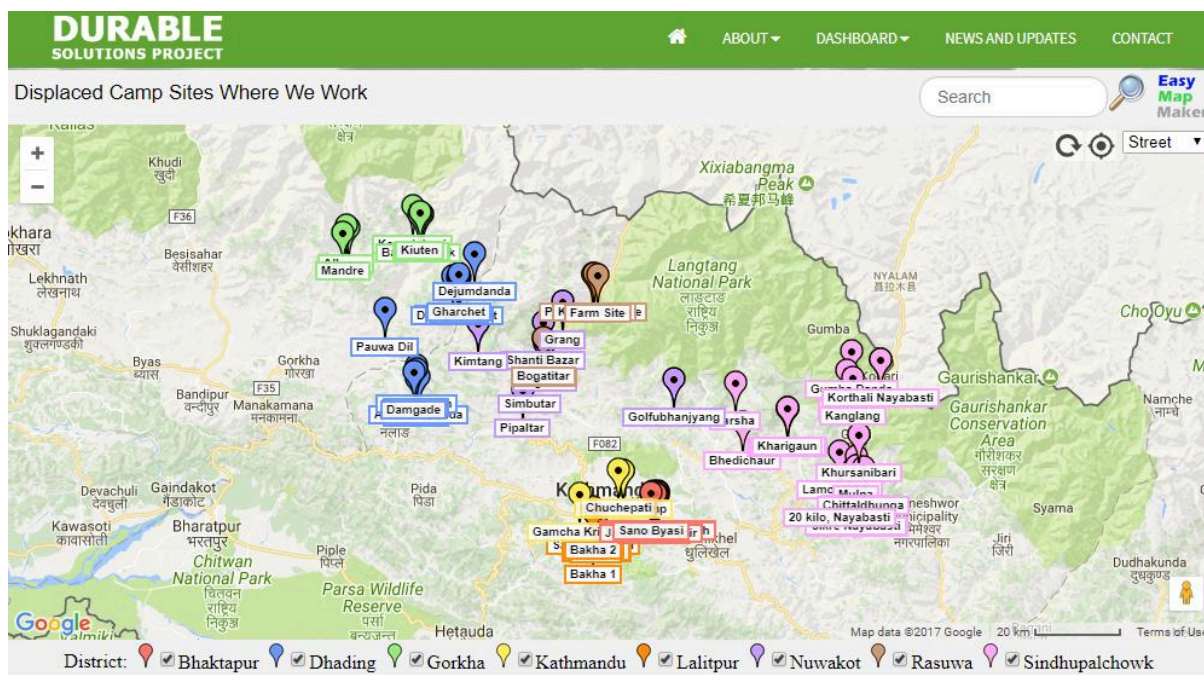

Figure 2 Location of the camps surveyed for HH data

The Table 1 and Table 2 also suggests that 526 out of 3063 HH did not migrate to the camps. Such HHs are not considered internally displaced. Analysis of the household (HH) data also suggests that 16 households with origin outside of the most affected districts are living together with those from the eight most affected districts are living in the camps surveyed. The column on ‘number of different camps people are living in’, Table 1; suggests that 678 HHs from Sindhupalchowk are living in 23 different camps.

Table 1 Place of origin for the HHs living in the camps.

District of origin (Pre-earthquake)	Number of Households	Number of people	Number of different camps people are living in
Bhaktapur	351	1644	14
Dhading	392	1665	13
Dolakha	1	7	1
Gorkha	218	909	8
Kathmandu	86	367	2
Lalitpur	150	661	9
Nuwakot	144	733	7
Other	15	52	2
Rasuwa	502	2247	14
Sindhupalchowk	678	3030	23
(blanks)	526	2279	41
Grand Total	3063	13594	83

Table 2 Migration status.

Did you migrate to this area	Number of Households	Number of People
No	526	2279
Yes	2537	11315
Grand Total	3063	13594

2.1 Extent of Post-earthquake migration/displacement

Table 3 gives an insight on the inter-district migration of the displaced people. Internally displaced people are mostly living in temporary shelters located in the district of their origin. However, 18% of the HHs in Rasuwa and 7.4% of the HHs in Sindhupalchowk are living in temporary shelters located respectively in the adjacent Districts of Nuwakot and Kathmandu. Similarly, it was worth noting that the highest number of people ‘not migrated’ but living in camps are from Gorkha and Dhading districts.

Table 3 Extent of migration

Post-earthquake District	District of origin (Pre-earthquake)											
	Not displaced	Bhaktapur	Dhading	Dolakha	Gorkha	Kathmandu	Lalitpur	Nuwakot	Rasuwa	Sindhupalchok	Other	Grand Total
Bhaktapur	33	349										382
Dhading	168		391									559
Gorkha	225				218							443
Kathmandu	9	2		1		86		1		50	14	163
Lalitpur	52						150				1	203
Nuwakot			1					142	91	11		245
Rasuwa								1	411			412
Sindhupalchok	39									617		656
Grand Total	526	351	392	1	218	86	150	144	502	678	15	3063

2.2 Extent of Post-earthquake migration/displacement

On analyzing the district of origin for people other than originally from the eight most affected districts: Bhaktapur, Dhading, Dolakha, Gorkha, Kathmandu, Lalitpur, Nuwakot, Sindhupalchowk; it was found that people as far as from Jhapa District in the Eastern Nepal are living in the temporary shelters. Others are from Districts adjacent to the Districts most affected by the Nepal Earthquake 2015.

Table 4 HHs from other districts currently living in the 8 most affected districts analyzed

District of origin (Pre-earthquake)	Post-earthquake District	
	Kathmandu	Lalitpur
Dolakha	3	
Jhapa	1	
Kavrepalanchok	2	
Makwanpur		1
Okhaldhunga	3	
Ramechhap	4	
Solukhumbu	1	
Grand Total	14	1

2.3 Ethnicity

The ethnicity of the displaced people suggests that the people of indigenous and marginalized groups (Dalit, Gurung, Tamang, and other indigenous groups) make up 66.5% of the internally displaced households (reporting migration post-EQ). Newar community constitutes 26.79% of internally displaced HHs.

Table 5 Ethnicity of the internally displaced people

Ethnicity	Living in camps		Migrated	
	Number of households	% of the total	Number of households	% of the total
Brahman	19	0.62%	19	0.75%
Chhetri	103	3.36%	94	3.71%
Sanyasi	1	0.03%	1	0.04%
Newar	778	25.40%	679	26.76%
Newar Dalit	26	0.85%	24	0.95%
Dalit	189	6.17%	172	6.78%

Gurung	421	13.74%	200	7.88%
Tamang	1359	44.37%	1189	46.87%
Other Janajati/Indigenous	109	3.56%	102	4.02%
Others	58	1.89%	57	2.25%
Grand Total	3063	100.00%	2537	100.00%

2.4 Issues of Gender equity and Social Inclusion

Table 6 presents the data on vulnerable population living in the camps. The lactating mothers with small children, Single women and person with disabilities are considered the vulnerable groups in this study. As with the number of displaced HHs and respective population, most number of vulnerable people are from Sindhupalchowk.

District of origin (Pre-earthquake)	Count of Household	Number of Male	Number of Female	Number of lactating mothers	Single women	Number of person with disabilities
Bhaktapur	351	827	817	23	53	89
Dhading	392	845	820	99	37	68
Dolakha	1	4	3	0	1	2
Gorkha	218	429	480	38	29	20
Kathmandu	86	192	175	12	22	36
Lalitpur	150	337	324	17	24	20
Nuwakot	144	372	361	37	22	13
Other	15	27	25	0	3	5
Rasuwa	502	1139	1108	138	42	49
Sindhupalchok	678	1492	1538	155	78	109
Grand Total	2537	5664	5651	519	311	411

2.5 Reasons of migration

Respondents reported a number of causes associated with migration in these areas. Almost all of them (99%) attribute damaged shelter as the primary reason for migration followed by Geological hazard such as earthquake and landslide at the place of origin. Collective migration, damage to the access-routes to the place of origin, and loss of farming land are also indicated as important causes of migration. Table 7 shows statistical details of reasons of migration with respect to geo-hazards. The results suggest that 73% of the households cite at least one type of geo-hazard as the primary reason for the displacement.

Table 6 Reasons of migration

Reasons of migration	Number of responses (HHs)	Percentage %	Rank
Damaged Shelter	2504	99%	1
Geological hazard such as Earthquake, Landslide at residential site	1814	72%	2
All my neighbors migrated	1343	53%	3
Geological hazard on the road/path between site and services/market	966	38%	4
Loss of farming land	822	32%	5
Services being halted due to earthquake (i.e. School, water etc)	337	13%	6
Job Opportunities	173	7%	7
For Education	153	6%	8
Other Reasons for Migration	45	2%	9

Table 7 Geo-hazard as reasons of migration

Reasons	Number of responses (HHs)	Percentage %
Geo Hazards (at least one types)	1856	73%
Damaged Shelter & Geo Hazard at site	1797	71%
Damaged Shelter & Geo Hazard on the road	957	38%
Geo hazards (both) and Shelter damage	916	36%

2.6 Distance migrated / Land ownership

The table below suggests that the migrated people are living in temporary shelters close to their place of origin. 48% of the total households are living within the same ward of origin while 93% of the displaced have migrated within the same district.

Table 8 Distance migrated

Row Labels	Number of Households	Percentage
Other District	179	7%
Same District	747	29%
Same VDC	401	16%
Same ward	1210	48%
Grand Total	2537	100%

The details on land ownership (Table 8) suggest that 26 households living in temporary shelters have acquired new land while 150 households lost theirs.

Table 9 Status of land ownership

Current land ownership	Pre EQ Land ownership		Grand Total
	No	Yes	
No	276 (91.4%)	150 (6.6%)	426
Yes	26 (8.6%)	2085 (93.3%)	2111
Grand Total	302	2235	2537

2.7 Shelter grants

The analysis on the status of shelter grants shows that 65.7% of the displaced households are enrolled as recipients of the shelter grants while 8.2% responded that they do not know about their status of shelter grants. Interestingly, 14% of the HHs believe they should have been eligible for the shelter grants but were not provided the promised grant.

Table 10 Status of shelter grants

Status	Count of Household	Count of Household2
Don't Know	207	8.2%

No I/My family were missed at the time of enrollment	1	0.0%
No, but I/My family should be eligible	354	14.0%
No, I/My family are not eligible	206	8.1%
No, I/My family were missed at the time of enrollment	67	2.6%
Refused	36	1.4%
Yes	1666	65.7%
Grand Total	2537	100.0%

It was found that of the 1666 HHs enrolled to receive the shelter grants about 94.3% have manage necessary agreements with the VDC/ municipalities.

Table 11 Status of agreement with VDC/municipality for the shelter grant

Agreement with VDC/municipality	Number of Household	Percentage (%)
No	95	5.7%
Yes	1571	94.3%
Grand Total	1666	100%

Table 12 Place of origin of the HHs in agreement with VDC/municipality for the shelter grant

Row Labels	No	Yes
Bhaktapur	22	206
Dhading	1	273
Gorkha	1	180
Kathmandu	2	8
Lalitpur	70	3
Nuwakot		115
Other	1	4
Rasuwa	2	158
Sindhupalchok	10	515
Grand Total	109	1462

The analysis suggests that of the people living in camps, only 57.6% have actually received the first grant while 4.3% are still waiting for the grant. The status of shelter grant for 38.1% of the HHs is still unresolved. The 109 HHs not to have received shelter grants and 1462 HHs to have received the shelter grants are the HHs who have already had agreements with the VDC/municipality for the promised first settlement.

Table 13 Status of the first installment of the shelter grant recipients

Grant received?	Number of Household	Percentage (%)
No	109	4.3%
Yes	1462	57.6%
(blank) (unknown + unqualified)	966	38.1%
Grand Total	2537	100.0%

2.8 Shelter grant: grievances

The 30.4% of the respondents cite lack of land certificate as the reason for their inability to make agreement with VDC/Municipality while 31.9% are unaware of the reasons why their shelter grant has been processed.

Table 14 Reason for not having the agreement with VDC/Municipality for shelter grant

Row Labels	Number of Household	Percentage (%)
I don't have land certificate	62	30.4%
I don't have required document	17	8.3%
I don't know	65	31.9%
Other	60	29.4%
Grand Total	204	100.0%

Table 15 provides details of the place of origin where the grievances regarding the shelter grant have been registered. Rasuwa has highest number of grievances registered.

Table 15 Grievances registered in VDC/municipality

Districts	Grievances		
	No	Yes	Grand Total
Bhaktapur	19	40	59

Dhading	4	87	91
Gorkha	4	28	32
Kathmandu	32	4	36
Lalitpur	15	17	32
Nuwakot	10	12	22
Other	7	1	8
Rasuwa	213	56	269
Sindhupalchok	38	78	116
Grand Total	342	323	665

2.9 Preference: Return to the place of origin / Stay at the camp sites / Relocation to be different area

The analysis of the preference of the displaced HHs regarding resettlement and relocation, much of the respondent prefer to stay in the area of the camps while 28.97% preferred to return to their place of origin. 11.75% of the HHs preferred to be relocated somewhere else.

Table 16 Preference regarding relocation/resettlement

Ideal Preference	Number of Households	Percentage (%)
Relocate somewhere else	298	11.75%
Return to place of origin	735	28.97%
Stay in the area (nearby)	1464	57.71%
Others	40	1.58%
Grand Total	2537	100.00%

Table 17 shows the services the displaced HHs seek to return to their place of origin. Most people seek return-cash to return to their place of origin and are also interested to have the basic services restored at their place of origin for their comfortable return to the place of origin.

Table 17 Services preferred for return to the place of origin

Districts	Information	Return-Cash	Documentation	Better services	Others
Bhaktapur	6	288	22	75	34
Dhading		93		86	7
Gorkha		17	1	2	2
Kathmandu		62	2	47	16

Lalitpur	7	128	35	41	19
Nuwakot		27	2	19	1
Rasuwa	4	30	6	18	3
Sindhupalchok	20	32	7	30	6
Grand Total	37	677	75	318	88

Table 18 below shows the concerns of the displaced households for the option to return to their place of origin. It was again stressed that the displaced are primarily concerned by the safety of their place of origin followed by stress on livelihood at return.

Table 18 Concerns over returning to the place of origin

Districts	Geohazard/Safety concern	Hazardous access to place of origin	Debris on it from shelter damage	Limited finances to begin reconstruction of shelter (cheaper to stay)	No livelihood due to damage/loss of agriculture land or other assets	Improved access to markets in new place	No rent in new place	Others
Bhaktapur	82	5	165	288	10	4	61	43
Dhading	384	292	304	17	99	20	29	9
Gorkha	206	170	87	25	23		6	7
Kathmandu	65	18	52	88	32	22	11	48
Lalitpur	34	5	83	111	8	2	9	13
Nuwakot	229	178	96	75	124	53	20	3
Rasuwa	410	367	263	174	302	261	33	1
Sindhupalchok	572	514	186	201	237	105	169	14
Grand Total	1982	1549	1236	979	835	467	338	138

Most people preferring to be settled at or near the location of the camps, seek land ownership to restart their normal lives supported by the availability of better services. (Table 19)

Table 19 Opinion of people preferring to stay at or near the camp sites

Row Labels	Basic Facilities	Feeling of Security	Fulfillment of Gen. and Pro. needs	Host Community support	Land ownership	Others
Bhaktapur	16			2	3	
Dhading	167	4		1	2	3
Gorkha	37	2		1	97	1
Kathmandu	47			1	7	4
Lalitpur	6	2		1	2	
Nuwakot	103	5		15	69	1
Rasuwa	76	1		9	258	2
Sindhupalchok	182	21	3	2	306	5
Grand Total	634	35	3	32	744	16

Among the people seeking to be relocated, most prefer to be relocated within the same district with availability of better services and livelihood options on top of cash support to start their lives at new places (Table 20 and Table 21)

Table 20 Location preference of people seeking relocation

Districts	Other	Other District	Same District	Same VDC	Same ward
Bhaktapur	1	1	11	3	5
Dhading	3	3	84	3	8
Gorkha			13	49	
Kathmandu	1	2	4	1	3
Lalitpur			2		3
Nuwakot	5	4	6	1	
Rasuwa	2	1	29	1	
Sindhupalchok	1	5	10	15	18
Grand Total	13	16	159	73	37

Table 21 Support preference of people seeking relocation

Districts	Cash Support	Fulfillment of basic needs	Technical support	Relocate Support - Others
Bhaktapur	20	10	5	3
Dhading	97	81	54	18
Gorkha	62	44	25	2
Kathmandu	11	6	2	3
Lalitpur	5	3	1	1
Nuwakot	14	12	9	2
Rasuwa	31	17	19	
Sindhupalchok	48	32	30	14
Grand Total	288	205	145	43

The results in Table 22 suggests that 40% of the HHs seeking relocation want to be relocated as group of households while 39% want the whole community to be relocated.

Table 22 Relocation options suggested by HHs seeking relocation

Districts	Relocate as HH	Relocate as a group of households	Relocate as a whole community together
Bhaktapur	9	6	7
Dhading	23	30	54
Gorkha	21	42	54
Kathmandu	9	3	
Lalitpur	4	1	
Nuwakot	3	8	6
Rasuwa	2	29	6
Sindhupalchok	14	37	25
Grand Total	85	156	152
Percentage (%)	21%	40%	39%

2.10 Geo-hazard survey by NRA in relation to the displaced households

The geo-hazard survey carried out by the experts at Nepal Reconstruction Authority (NRA) have suggested of three categories for the places of origin.

CAT 1 includes safer communities/villages where reconstruction can be started any time,

CAT 2 includes communities/villages under the risk of managing geo-hazards. Reconstruction can be started only after applying the suitable counter measures and

CAT 3 includes unsafe communities/villages due to the existing state of geo-hazard which is extremely difficult to control technically or too expensive. Reconstruction is therefore not recommended in these areas.

There was however some mismatch between the areas surveyed by the NRA and the place of origin reported by the displaced population living in the temporary camps. Table 23 summarizes the findings of the interlinking between the household questionnaire administered by the consortium and the geo-hazard survey conducted by the NRA.

Table 23 Summary of the Interlinkage between the HH data with the geo-hazard survey of NRA.

Districts	HHs from Wards requiring assessment	HHs from VDCs requiring assessment	Cat 1	Cat 2	Cat 3
Bhaktapur		382			
Dhading	88	168		131	172
Gorkha	64	227			152
Kathmandu	38	124			4
Lalitpur		203			
Nuwakot	24	142			79
Rasuwa	11	1		1	399
Sindhupalchok	129	355	28	79	65
Grand Total	354	1602	28	211	868

The analysis highlights that VDC of origin of 354 HH has not been surveyed by the NRA in the eight Districts studied. Similarly, among the VDCs surveyed, geo-hazard information of the wards 1602 HH is also missing. The places of origin of these HHs required assessment of geo-hazard. The lack of information of these VDCs and wards hindered the classification of

the HHs into the three categories discussed above. However, the exact place of origin of 1107 households have been surveyed by the NRA for possible geo-hazards. This analysis shows that place of origin of most people (868 HH) covered by the geo-hazard survey fall under Cat 3.

3 Recommendation

As suggested by the results in Table 23, some additional areas will require Geo-hazard assessment to identify the suitable options for the displaced population. The details of the sites requiring assessment of geo-hazard is presented as Table 24. Location (wards of VDCs) with greater than 10 HHs was an important criteria suggested by the consortium partners and included in obtaining the sites listed in Table 24.

Table 24 Additional sites requiring geo-hazard assessment

Districts	VDC	Wards
Dhading	Lapa	1, 2
	Tipling	9
