

An initiative of CRS/HRRP

Hand Washing Station supported by CRS/HRRP as an initiative to control COVID-19 Transmission

(Installed Handwashing stations: 12; Districts reached: 11; GMaLI supported: 9; NRA: 2; CLPIU: 1)

September 2020

ACKNOWLEDGEMENT

HRRP is grateful to CRS for funding this project. Equally, HRRP would like to thank all the DLPIU-GMaLI Offices, authorities and staff members who coordinated and collaborated in the installation of foot operated hand-washing stations at their respective location to prevent COVID-19 transmission and bring change in the hand washing behavior.

We hereby would also like to acknowledge the hard work of the SMT team members, DMT, operations team, field-based staff, vendor and drivers whose collective efforts and support helped in the successful installation and proper use of the resources.

HAND-WASHING STATION SUPPORTED BY CRS/HRRP AS AN INITIATIVE TO CONTROL COVID-19 TRANSMISSION

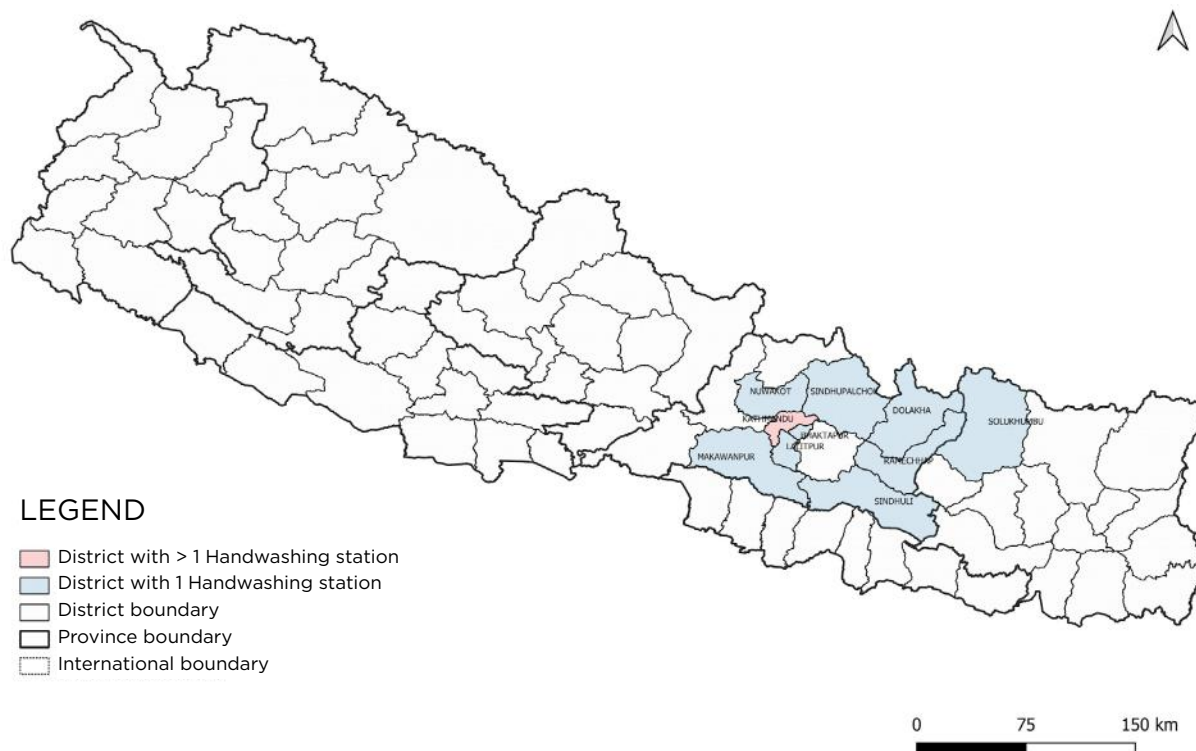

BACKGROUND

China first announced the outbreak of a new pneumonia-like virus in the city of Wuhan on December 31, 2019. As of writing there are 29,788,532+ cases of the virus- now named COVID19- acute respiratory disease- which includes 940,353+ deaths and 21,597,380+ recovered. On 30th January, the World Health Organization(WHO) declared the outbreak a public health emergency of international concern(PHEIC). Subsequently on March 11th, 2020, a pandemic situation was declared. At present, we are not in a position to effectively treat COVID-19 since neither approved vaccines nor specific antiviral drugs for treating human CoV infections are available. Most nations are currently making efforts to prevent further spreading of this potentially deadly virus by implementing preventive and control strategies.

COVID-19 (Coronavirus) global pandemic has impacted Nepal since March 2020 and on 24th march the government of Nepal has imposed complete lockdown with business closure and restriction on freedom of movement including incoming and outgoing air flights within and outside of the country. Despite lockdown measures, COVID-19 positive cases have continued to increase with a total 56,788 positive cases in Nepal. As of September 15, Nepal had total COVID-19 positive cases of 56,788 with 15,779 undergoing medical treatment under isolation and 371 deaths. 46,638 have returned home after recovery and 7,250 are still under quarantine. Almost all organizations both government and non-government went through remote working modalities. Program continuity has been disrupted. Government has decided to resume public transport both by air and road from mid-September based on the assessment of the current COVID-19 situation due to the fact that it has severely impacted the livelihood and economic aspect of the people's daily lives.

Hand hygiene or washing hands with soap is the first line of defence against the corona virus and the move to install such hand-washing stations have been largely welcomed. By exploring the need and to ensure the adequate hand-washing facilities at all the offices where CRS staff are based, Catholic Relief Services-Nepal (CRS-Nepal) raised additional funding to maximize safety standards for HRRP staff and government counterparts working to support earthquake-affected households. HRRP with support of funding from CRS-Nepal contributed to GoN by installing a foot-operated "Hand-Washing Technology" in the DLPIU-GMaLI Offices of Kathmandu, Bhaktapur, Lalitpur, Nuwakot, Sindhuli, Makawanpur, Ramechhap, Sindhupalchowk, Dolakha and Solukhumbu districts including two at the NRA, Singhadurbar in Kathmandu and CLPIU-GMaLI as mentioned hereunder in the table below.

HRRP/CRS SUPPORTED DISTRICTS WITH HAND-WASHING STATIONS

S.No.	Items	No. of Sets	Size of Water Tank Installed	District	Location
1.	Hand-Washing Station	2	500 ltr.	Kathmandu	NRA Singha Durbar
2.	Hand-Washing Station	1	500 ltr.	Kathmandu	GMALI-Office
3.	Hand-Washing Station	1	500 ltr.	Bhaktapur	GMALI-Office
4.	Hand-Washing Station	1	500 ltr.	Lalitpur	CLPIU-Office, Jwagal
5.	Hand-Washing Station	1	500 ltr.	Nuwakot	GMALI-Office
6.	Hand-Washing Station	1	500 ltr.	Ramechhap	GMALI-Office
7.	Hand-Washing Station	1	500 ltr.	Sindhuli	GMALI-Office
8.	Hand-Washing Station	1	500 ltr.	Sindhupalchowk	GMALI-Office
9.	Hand-Washing Station	1	500 ltr.	Solukhumbu	GMALI-Office
10.	Hand-Washing Station	1	500 ltr.	Dolakha	GMALI-Office
11.	Hand-Washing Station	1	500 ltr.	Makwanpur	GMALI-Office
Total		12			

OBJECTIVE

We may not yet have vaccines or treatments against COVID-19, but through this station it can help to reduce the spread of the virus. There's a reason why governments and public health experts worldwide have been advising us to practice good hand hygiene, which is to wash our hands regularly or apply hand sanitizer in absence of clean water and soap. It really works. Good hand hygiene could reduce cases of respiratory diseases by 20%, and diarrhea by 30%. That means it has potential to have a huge impact on the spread of the coronavirus. Behavior change is often difficult to achieve and takes years, but we have seen how within just a few months, the Covid-19 crisis has impacted behavior. Handwashing has become regular practice even in rural areas in both urban and rural areas and installation of foot operated hand washing stations have contributed to regular hand washing behavioral change in all the districts where CRS/HRRP have been working.

Hence the main objective of the installation of foot operated hand-washing stations was to support NRA, CLPIU-GMaLI, DLPIU-GMaLI Offices to ensure the safety of all staff and the beneficiaries they serve, to control COVID-19 infection, and raise public awareness for hand washing through proper hand hygiene practice.

COSTING & INSTALLATION TECHNOLOGY

HRRP installed a total 12-foot operated hand-washing station by employing a vendor from Kathmandu, Shree Jyoti Binayak Pvt. Ltd. at the cost of NPR 25,000/- for each hand-washing station excluding the transportation cost. The transportation facility was jointly managed by CRS/HRRP and GMALI-Offices.

The foot operated hand-washing station consisted of poly tank-500 liters-1, wash basin-1, tap-1, liquid soap with bottle-1, including other fitting accessories and technical service for installation. The user presses the right pedal, and water flows through the tap; s/he then presses the left pedal, and liquid soap squirts out. The World Health Organization (WHO) recommends that handwashing with soap and water should last 20-30 seconds. This requires a significant quantity of water; if a tap is opened for 20-30 seconds, about 2-3 liter will be needed just to wash one pair of hands. Clearly it is better to reduce the amount of water by using it to just wet the hands, and then to wash off the soap. This can be done easily operating a pedal. To ensure adequate water supply, the hand-washing station has an iron frame supporting a 500-liter HDPE (plastic) tank.

OUTCOME

HRRP installed and handed over 12-foot operated hand-washing stations in various DLPIU-GMaLI Offices, CLPIU-GMaLI and NRA central office to support the government to control and prevent COVID-19 transmission. HRRP supported with all necessary assorted items for the installation of foot operated hand washing station in DLPIU-GMaLI Offices (9) CLPIU-GMaLI (1) and NRA Central Office in Singh Durbar (2).

As of now it is widely in use and properly managed in all the locations. The immediate change in behavior of the staff members and beneficiaries can be seen as per the reports from the districts staff members. It is expected that people will use it in the long term and benefit from the foot operated hand washing system and bring gradual change in the behavior to wash hands regularly to prevent from COVID-19 transmission.

Some sample photographs by HRRP of foot operated hand washing stations installed in various offices as an initiative to control and prevent COVID-19 transmission with the support from HRRP/CRS-Nepal.
