

# **“Gorkha Recovery and Resilience Program”**

**Presentation**

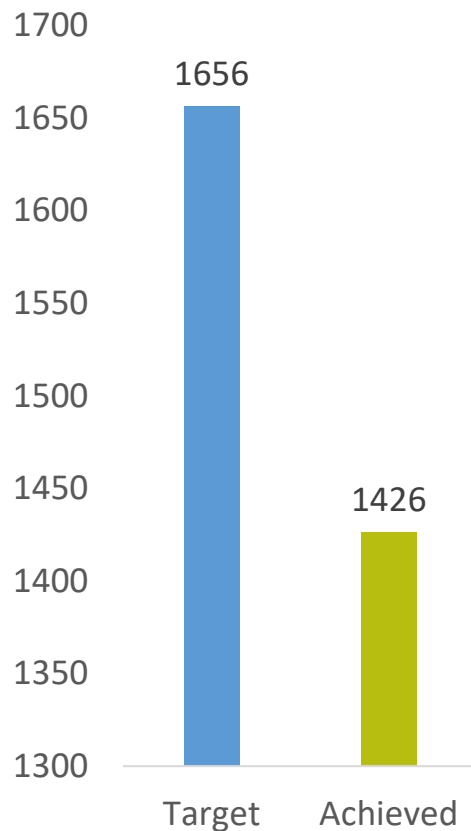

Presented by: Aditya Raj Timilsina

# SHELTER

## Activity: Skilled Mason Training (7 day training)

### Achievement

### Outcomes

- 1370 Male received training
- 56 Female received training
- \$28/participant

#### Final Test scored

(passing marks - 70/100)  
66 % of total masons passed

#### Utility:

(Sample data collected)  
83 % male masons found working  
13 % female masons found working

#### Impact

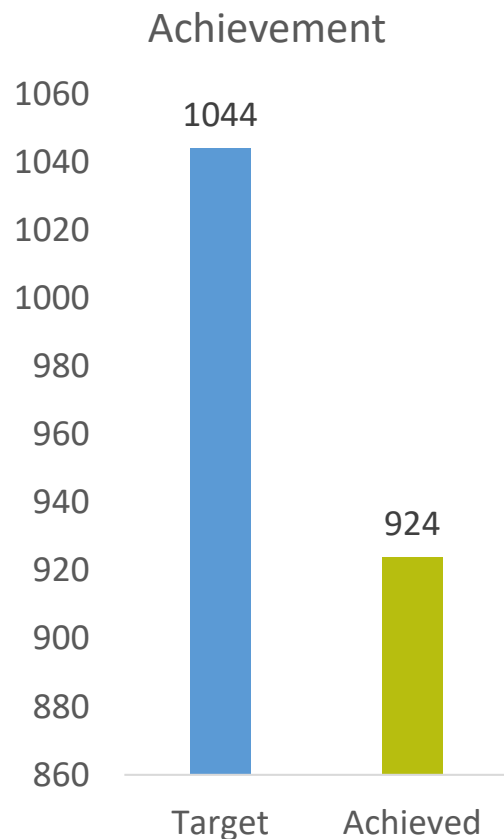

- 91 % of completed houses are compliant with the Earthquake – Safe construction techniques.
- 82 % of HHs engaged in reconstruction.

### Photograph

# SHELTER

## Activity: Unskilled Mason Training (50 days training)

### Outcomes

- 683 Male received training
- 241 Female received training
- \$250/participant

### Final Test scored

(passing marks - 70/100)

- 67% of total masons passed

### Utility:

(Sample data collected)

83 % male masons found working

13 % female masons found working

### Impact

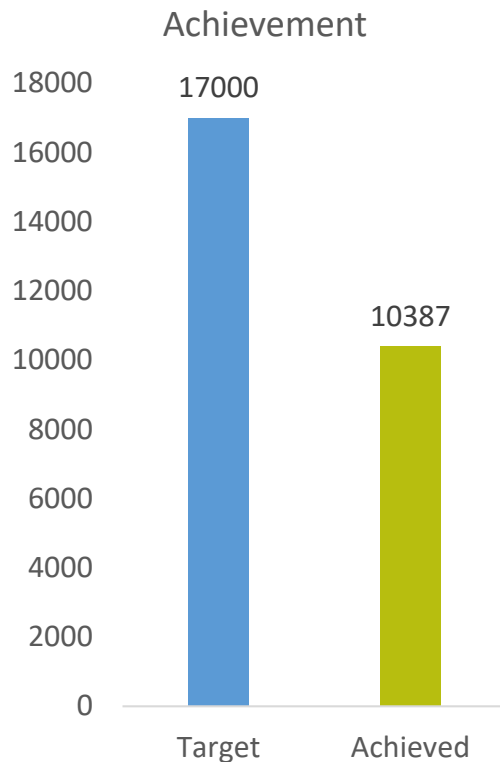

- 96 % of HHs feel safer in their improved shelters
- 64 % of HHs have improved knowledge on EQ- Safe construction techniques.

### Photograph

## SHELTER

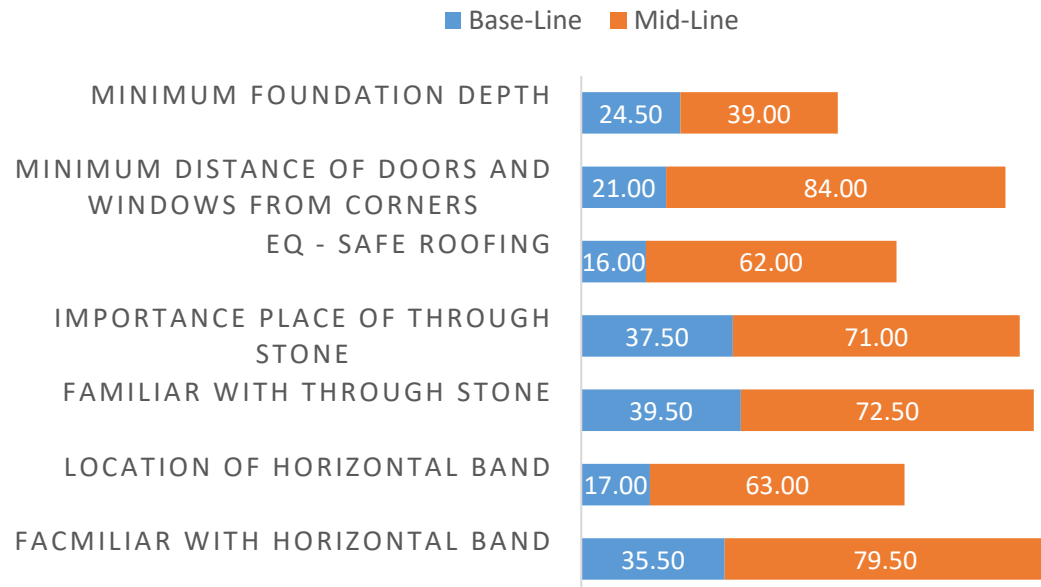

### Activity: Door to Door Technical Assistance

#### Outcomes

**3574** - Female and **6813** – Male, Total **three round** of technical assistance  
 Key technical messages spread through the D2D Assistance and IEC Material shows that percentage of midline is higher than that of baseline.  
 It supports on the compliance for receiving the tranches

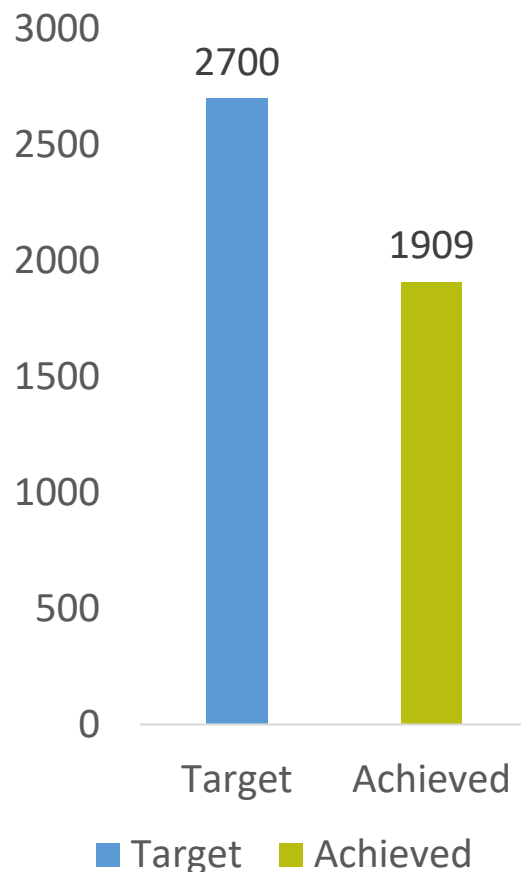

#### TECHNICAL KEY MESSAGES (%)

## SHELTER

### Activity: On the Job Technical Assistance

#### Achievement

#### Outcomes

**144** female and **1,463** male  
Total **three** round of technical assistance

#### Impact

- Trained Masons started working as small contractors in their communities.

#### Photograph

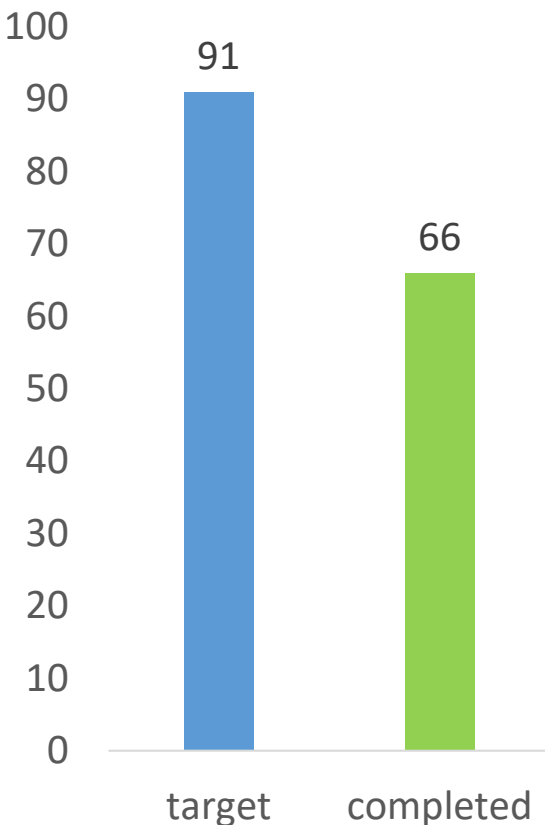

# SHELTER

## Activity: Demonstration Houses

■ target ■ completed

### Outcomes

#### Size

##### RCC

Size: 8.2m x 7m

##### SMM

Without veranda:

Size: 7.35m X 3.9m

With Veranda:

Size: 7.35m x 6.3m

#### Impact

- Trained Community Masons ensure sustainability of earthquake – safe construction within communities.
- Masons from other districts are trained and can implement EQ-Safe technique's across Nepal.

### Photograph

# SHELTER

## Activity: New Design

Construction of latrine through **Polyethylene Terephthalate Ethylene Technology.**

Pilot for Toilet and testing its durability.

### **Advantage**

- can reduce 40 % cost in comparing with Brick Wall
- Non-brittle characteristic
- Absorbs abrupt shock loads
- Houses are bio-climatic in design

### **Disadvantage:**

- Not easily available because of dual use

### Photographs

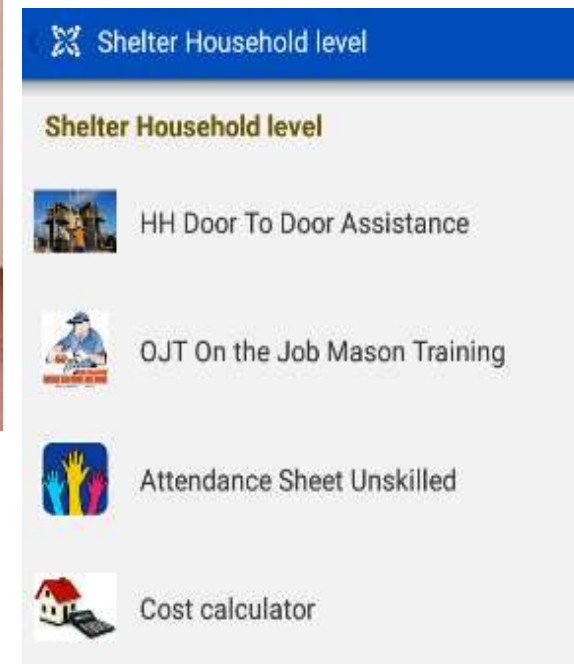

# INNOVATION

## MONITORING THROUGH ICT4D

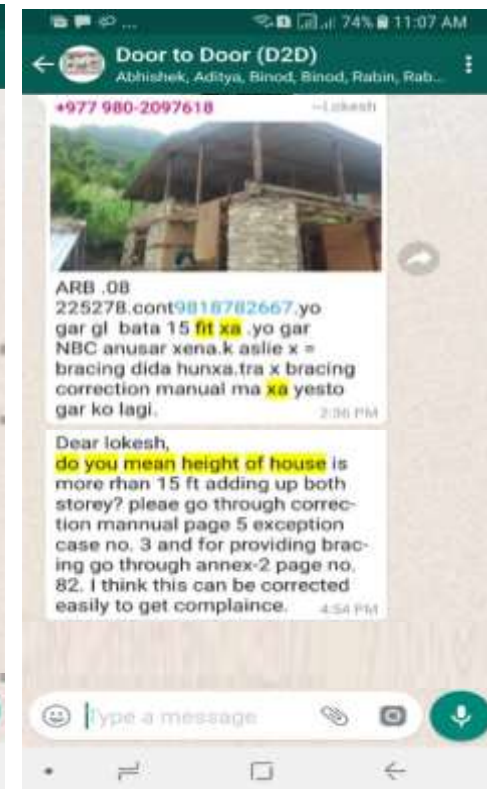

- Use of modern electronic mean and software
- CRS uses a software named Commcare
- where each staff is provided with a tablet with a built-in application
- All activities are being carried out using this modern technology
- Fast and accurate data gathering
- Realtime data analysis

# INNOVATION

## WhatsApp for immediate feedback and consultation

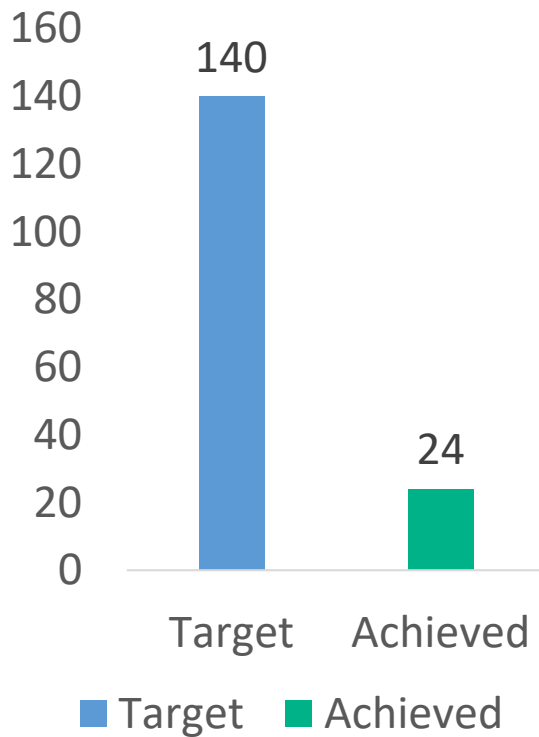

- Two way daily and rigorous communication on WhatsApp
- Using Whatsapp staff send continuously daily messages for any confusion or question they face in field
- Questions are sent in Whatsapp group so that other can see questions and responses too

# WASH

## Activity: Water Supply Schemes

### Achievement

### Outcomes

- ✓ Total \$ 12,012 earn through water structure maintenance by labors.
- ✓ **98** Female and **185** Male participation in the construction process.
- ✓ Testing of water at source and household Operation and maintenance plan developed to ensure sustainability
- ✓ one house one tap strategy
- ✓ Community agrees to contribute 20% - 30% for ensuring ownership and sustainability

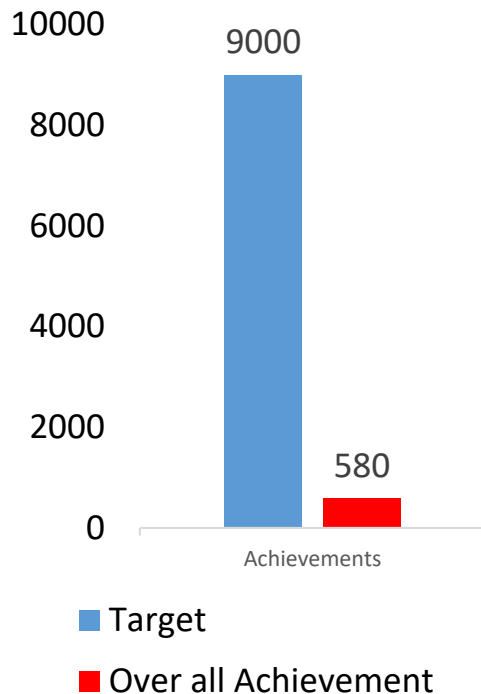

### Photographs

# WASH

## Activity: Hygiene Promotion

### Achievements

### Outcomes

#### Baseline

Critical time of handwashing  
8% female, 6% male

Knowledge on waste management  
53% Female, 51% Male

Causes of water contamination  
36% Female, 41% Male

#### Feedback from different stakeholders and proposed changes/improvement

- Specific messages as identified in baseline
- Paired with other activities to make it cost effective

### Photograph

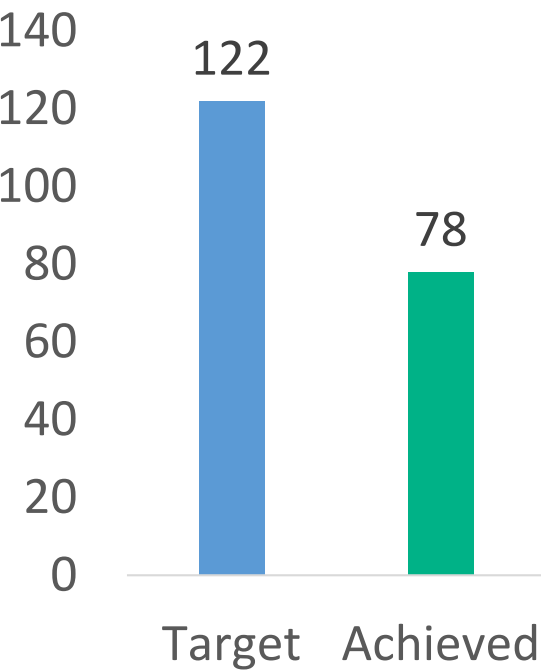

## ASSET RESTORATION

### Activity: Infrastructure Rehabilitation

#### Achievement

#### Outcomes

- **3,033** individuals earned cash against work (average **\$ 120/Person**)
- **1,231** Female, **1,802** Male
- Total **\$ 352,701** Injection of economy only through labor earning.

#### Type of schemes

|                          |    |
|--------------------------|----|
| Trail Road               | 58 |
| Irrigation Canals        | 05 |
| Retaining walls          | 02 |
| Drainage                 | 03 |
| Land/slope Stabilization | 04 |
| Others                   | 04 |

#### Photographs

# Livelihoods

**Activity:** Provide targeted technical support including **on-farm demonstration, farmer field schools and farmer feedback sessions on improved agriculture technologies**

| Crops       | Total Achieve (HHs) |
|-------------|---------------------|
| Maize       | 7496                |
| Paddy       | 4759                |
| Cauliflower | 1352                |
| Potato      | 1352                |

## Identify the Best management practices : off seasonal cauliflower

- Nursery under plastic tunnel/thatches
- Line sowing
- Seedling selection

## Outcomes

- Knowledge on Improve practices
- Increase ability to evaluate and make decisions to adopt the improve technologies

### Maize:

- Project demonstration plots (improved varieties) 36% more yield compared to local varieties.
- In the demonstration plots almost 16% plants had more than one cob per plant while in controls the percentage was 8.5%.

### Paddy:

- Demonstration plots (improved varieties) gave 28.93% more yield compared to local varieties.

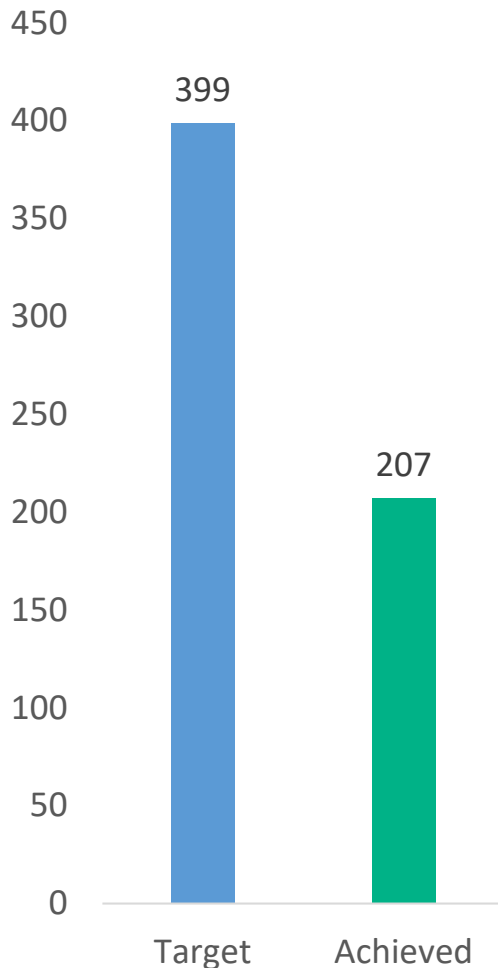

Photograph

## Livelihoods

### Activity: Off seasonal cauliflower

#### Achievement

#### Outcomes

- Communities adopted options to diversity their livelihoods.
- Farmers keep profit and Loss calculation, which help to make Business plan on further
- Av. income NPR 7827 and Av. expense NPR 1490 (*Maximum NPR 26,500 earn from selling 325 K.G*)

#### Feedback from different stakeholders and proposed changes/improvements

- Piloting on tomato farming under plastic tunnel, with business plan
- One community based potato rustic storage

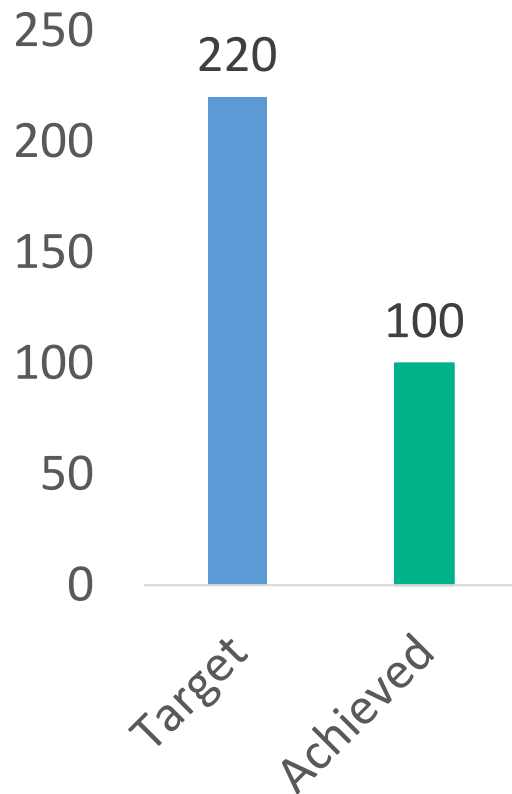

#### Photograph

## Livelihoods

### Activity: Pilot on cardamom

#### Achievement

#### Outcomes

- On field result shows survival rate cardamom seedlings is 85% -95% on working area.
- 20 Lead farmers trained to developed LRP coordination with CDC
- Exposure visit at Lamjung
- Scale up opportunity

**Collaborative technical partner:** FNCCI/AEC

#### Photograph

## Protection/Community Feedback

### Feedback Channel

- Face to Face
- Phone Call
- Letter
- Feedback Box
- Feedback Form

### Types of Feedback

- Quality
- Delay
- Information
- Support
- Quantity
- Other

- Most feedbacks are around beneficiaries satisfaction about the project and requesting more projects
- Toll free number both for NTC and NCELL
- All Feedbacks should be closed with in one month
- All feedbacks presented here are responded and closed

# Community Reconstruction Committee(CRC) Approach

- Total Community Reconstruction Committee(CRC) formation 112.
- In one CRC, 9 member where 3 female and 6 male
- 1 Female member compulsory in executive board
- 17 CRC is lead by Female out of 112.
- Reformation of CRC Committee to 7 member as Nepal Government modality.

# CRC Approach

The main areas where CRCs support CRS Nepal are as follows:

- Day to day Information dissemination in the communities
- Act as bridge to ensure two way communications.
- Identification of vulnerable households to participate as skilled and unskilled labors in Asset Restoration/Infrastructure Schemes
- Identification and finalization of land for the construction of demonstration houses

# CRC Approach

## **Roles and Responsibilities'**

- Support developing households selection criteria for different project activities
- Support beneficiary selection per defined criteria for different project activities
- Support Identification and Prioritization of Asset Restoration/Infrastructures schemes
- Supervision of construction activities in the communities
- Ensure operation and maintenance of the infrastructure schemes and demonstration houses once completed.

**THANK YOU!!!**
