

Reconstruction Skills Project

HRRP Meeting, Kavrepalanchowk

Mr. Ganga B. BK
Cluster Coordinator
29/11/2016

Our History

- Started working in 1956
- Swiss Based organization working in 33 countries
- Having more than 100,000 members, and 1,500 staff members globally
- Contributing to government of Nepal's development agenda

Programme and Outcome

Cross-cutting
Programme 1:

Gender
equality and
social inclusion

Cross-cutting
Programme 2:

Climate change
and disaster
risk
management

Cross-cutting
Programme 3:

Good
Governance

Programme 1: Food security and nutrition

Programme 2: Integrated water resources management

Programme 3: Economic growth and decent employment

Independent projects under working areas

Project Background

- Project Start/End: June 2016 to Jan 2018
- Funding by : DFID
- Implemented by: HELVETAS Swiss Intercooperation Nepal
- Working district: Kavrepalanchowk
- Working VDCs : 30
- Target: 970 Mason, 160 Construction Carpentry
- Budget: NPR 48.5 Million

HELVETAS
Swiss Intercooperation

60 YEARS

NEPAL

Reconstruction Skills : Key Features

- ☐ Result based financing
- ☐ Curriculum revision with EQ resilient element
- ☐ 50-days on-site training for mason (970)
- ☐ 7-days' training for existing carpenter (160)
- ☐ 2 houses build in 50 day during the training
- ☐ Skills test mandatory to all trainees
- ☐ Trainer : Trainee ratio - 1:5
- ☐ Owner led construction
- ☐ Training delivery by T&Es
- ☐ Focus on labor market

Reconstruction Skills- Project Cycle

Beneficiaries Selection Criteria

- People between 16 – 40 years
- Around 25% above the age (Subject to approval)
- From earthquake affected districts/VDCs
- Willing to be Mason or Construction Carpenter
- At least 30% women mandatory
- Priority to disadvantaged group

Confidence	High	<i>“Technical skill only”</i>	<i>“Entrepreneurship skills, career growth”</i>
	Low	<i>“Technical skills & soft skills”</i>	<i>“Soft skills only”</i>
		Low	High
		Skills	

Quality Assurance

- › **Regular Monitoring- Training**
(Pre, During and Post Training Phase)
- › **Technical Supervision- Construction** (Technical Team T&Es & Project)
- › **T&Es' Capacity Building**
- › **Support to revise and update Training Curricula & Manual**
- › **ToT for Instructors** (From TITI)

Monitoring Aspects:

Pre Training	During Training	Post Training
› Curricula Revision	› Tools Distribution	› Technical support
› Training Manual	› On Site Training	› Construction supervision
› ToT for trainers	› Training Monitoring	› Income/employment verification
› Service Procurement	› Construction Monitoring	
› Establishing Engineering Unit	› Review/Reflection	
› Coordination	› Coordination with other organizations/project	
› Orientation to T&Es	› Technical support	
› Announcement		
› Selection		
› Orientation		
› Site Verification		

Financing Modality

Reconstruction Skills Input:

- ❑ Instructors having earthquake-resilient ToT on construction to the trainers
- ❑ Revised curricula, manual, flip charts, hand books
- ❑ Layer of monitoring by technical and non-technical staff
- ❑ Incentives for T&Es: as per enrolment of target beneficiaries
- ❑ No replacement of women participants
- ❑ Stipend (equivalent to NRs 200) & Tiffin for Rs.50 /day
- ❑ Tools to trainees (Masonry & construction Carpentry -5000)

Electronic Photo Monitoring System

Place: Search District VDC/Muni Go

Search: Go

Construction Status

Beneficiary Identity No: 234

Beneficiary:

Citizen No:

Land Plot No:

Ward No:

Milestone 1: Site Selection

1.1 Is the land is suitable for building construction:

1.2 Drawing submitted to EFS? :

1.3 Is the field verified by technical team:

Milestone 2: Foundation status

Conclusion:

Positive Aspect	Challenges / Issues	Learnings / Experiences
• Training approach of EF-SR is highly accepted by community and stakeholders • A good initiator working in reconstruction	• Unavailability of quality Materials (stones and woods) in some cases • Very difficult to manage construction materials for the economically poor people • Only one design of stone and mud mortar house seems very confined in some cases (family size, wooden house) • Access to community forestry resources (e.g. Timber, wood)	• Need to make all the construction materials available before starting the training (at least 10 days require) • Combination of carpenter and mason training is found effective to build house in better quality • Synergetic efforts need to make it more success
