

Meeting Minutes

Gorkha HRRP Household WASH Coordination Meeting

Date: 19th Jan, 2017

Time: 3:00 PM

Location: HRRP Office, Hotel Gorkha Inn

Chair: Mr. Ratna Pd Lamichhane (Division Chief, WSSDO)

Participants: CARE, CRS, SDSC, UN-Nepal, SAHAS Nepal, NRCS, ECO-Nepal, DCA, LWR/SSICDC, SSICDC, Goreto, SAVE, OXFAM, WSSDO

Agendas

1. Introduction
2. WASH Cluster/POs updates on WASH
3. 4W Orientation and Update/ Avoiding duplication in Coordination mechanism
5. Sharing existing Toilet Designs and WASH information materials(IEC)
 - Presentation on Dual Septic Pit Design (CRS)
6. Monthly reporting products and IM Products
7. AOB

1. Introduction

House Hold WASH coordination meeting was facilitated by HRRP district coordinator Mr. Minar Thapa Magar and chaired by Mr. Ratna Pd Lamichhane, Division chief of WSSDO, Gorkha. Representatives from **14** POs attended the meeting.

The meeting was focused on sharing of agency updates on WASH and to develop joint communication mechanism regarding household WASH activities between HRRP, WASH cluster, WSSDO, DWASH-CC and POs. Meeting was an opportunity to introduce actors supporting WASH with each other and to initiate WASH working sessions to make joint strategic planning and to discuss importance of WASH in reconstruction and recovery process.

Revised housing grant disbursement guideline was presented and discussed about last tranche of 25 thousand of subsidy for WASH and discussion was also led to maintain effective information management system and products.

2. WASH Cluster/POS updates on WASH/Discussion on New revised subsidy disbursement guideline-2073

- Various POs updated about their achievement and planning of WASH (Water Sanitation and Hygiene) activities in various VDCs of Gorkha District. POs were supporting rehabilitation and construction of Water Supply Schemes, Household Latrines, Hygiene promotion activities to reinstate Open Defecation Free Zone and to build back safer and healthier.
- WASH Cluster(CARE) updated about recent collection of 4W on format requested by WSSDO which may not provide full information and data on Household WASH and requested HRRP to work on another template to collect relevant data and information HRRP required.

- WASH cluster and POs mentioned about need of regular meetings to share new ideas and to avoid communication gap through regular sharing and updating mechanism.
- HRRP presented new updated Subsidy disbursement tranche process based on Revised Subsidy disbursement guideline-2073 as follows.
 - ✓ **1st tranche after enrollment- NPR 50000.00**
 - ✓ **2nd tranche after completion of DPC/Plinth level and after getting compliance with inspection checklist- NPR 150000.00**
 - ✓ **3rd tranche after completion of roof band level (final Seismic Band level) before installation or construction of roof and after getting compliance with inspection checklist of that level- NPR 75000.00**
 - ✓ **4th tranche after getting compliance with final construction checklist of completion and if they complete house along with Toilet and Solar Setup or Bio-Gas plant or any other relevant alternate energy setup- NPR 25000.00 (but inspection process of final 25000 is not mentioned in Inspection Guideline as it was published before this revised guideline.**
- HRRP presented recently published revised housing grant disbursement guideline-2073 by NRA to partners and described **point 13** mentioned in **Annex-3** which illustrates that beneficiaries will receive Rs 75000.00 as third tranche of subsidy after getting compliance with Inspection Checklist at roof band level before completing the roof of house or full house and will receive remaining Rs 25000.00 if they complete house along with Toilet and Solar setup or Bio-Gas plant or any other relevant alternate energy source.
- POs also realized and presented that organizations are supporting house hold sanitation with CASH and Materials support and revised guideline states that beneficiaries will not receive government subsidy if they are getting assistance from any other source. We need to stop and think for Household WASH from the beginning of this reconstruction of houses.
- POs also shared their experience from field that beneficiaries are not sure where they will construct toilet as they are still not sure of their house construction site and they need support for this from the beginning of reconstruction of house as toilet design and its site selection should be integrated with shelter from beginning.
- HRRP described need of collaboration and integration of shelter and WASH from the beginning of reconstruction process and also promised to discuss this issue with DUDBC/DLPIU. Government and POs engineer who will be providing technical support to beneficiaries for reconstruction should be aware of this process and they should be supporting beneficiaries to reconstruct their house and toilet at same time from very start of site layout process.

3. 4W Orientation and Update/Avoiding Duplication in Coordination Mechanism

- HRRP provided a A3 copy of Activity Index of HRRP's 4W to each of participants and oriented participants with two type of assistance categorized as Technical and Financial/ Material/Labor assistance. HRRP also oriented sub type of activity and activity details and also illustrated importance of tracking all these WASH data to avoid duplication and to resolve gaps.
- HRRP, WASH cluster and all POS agreed to share and update 4W at end of every month i.e. 25th of every month rather than collecting and updating it twice of month in order as everybody will be busy in field and update may not be available in such short period of time.
- HRRP also presented DASH Board of HRRP and importance of updating such information and data to become more transparent and accountable to everyone. Anyone can visit HRRP Dashboard and can

get update about partners planning and achievement in particular area and DASHBOARD is super cool graphical representation of 4W Data.

4. Sharing of existing toilet designs and WASH information materials(IEC)

- HRRP requested POs to share their existing toilet designs and WASH IEC (Information Education and Communication) materials with HRRP to maintain common resource bank or library and can be shared with everyone. HRRP also reflected about email form HRRP requesting partners to submit designs and WASH IEC materials to central HRRP.
- CRS presented their concept and design of dual septic pit, based on their experience people were in need of small suggestion and dimension to create normal dual pit in rural areas. People from rural part were using single pit latrine and when its full they were putting kerosene in it to kill smell and they emptied it to another pit and it's not hygienic, that is why CRS just came up with concept of dual pit space planning and design during or before construction of toilet and when its full they can divert its flow to new pit and can use sludge of previous as good manure after 2-3 years.
- HRRP also requested POs for presentation in relevant topic as this will be good opportunity to share their relevant expertise with other partners in upcoming meetings.

5. Monthly Reporting Products and IM Products

- HRRP suggested to prepare some relevant monthly Information products at district level for regular update and joint planning and also committed to provide support to WASH cluster in preparation of this type of local district products if needed.

6. AOB

- POs updated that they have been supporting communities with financial support of Rs 5000.00 or material support for household latrine based on previous D-WASH CC, V-WASH CC decision and agreement with communities.
- POs also suggested to aim for private connection (i.e. Tap per HH) during planning and implementation phase. WSSDO chief mentioned that these issues should be discussed in upcoming DWASH CC meeting where all organizations are part of it to make joint planning and decision.
- POs updated that they have already planned and committed some communities to support Rs 5000.00 as cash assistance or materials for toilet and their project will phase out at end of March, 2017. POs will not think of distribution of any kind of CASH or Materials support for beneficiaries after March as its clearly mentioned in government revised subsidy guideline that government will provide support on that.
- POs requested WSSDO Chief to initiate to prepare District WASH Master Plan as they can contribute some resources and support to prepare WASH master plan for Gorkha District.
- POs also requested WSSDO to coordinate with other sector departments District Education Office(DEO), District Health Office(DHO), DUDBC etc as there is a huge gap and need of WASH in community infrastructure program.
- POs agreed that Washing area also should be promoted during reconstruction of house.

7. Closing Remarks from Chief, WSSDO, Gorkha

- Mr. Ratna Pd Lamichhane, Chief of WSSDO, Gorkha thanked HRRP for organizing and facilitating this meeting as there was need of this type of coordination meeting from the beginning and also thanked all POs for actively participating in this meeting.
- Chief expressed his personal opinion that Distribution of CASH and materials for latrine support was actually good strategy for emergency but may not be relevant in recovery and reconstruction phase and we all need to discuss about this in upcoming DWASH-CC meeting as now Government has also allocated some amount as WASH subsidy for latrine and solar or Bio gas plant.
- He also requested organization to think about **Sustainable Development Goal** to build back safer and healthier and target for **One House One Tap and One Toilet approach**.
- He also requested POs to plan and use those resources for triggering and sensitization rather than distribution.
- He updated about consultant who was already hired to develop WASH strategy and to prepare District WASH plan.
- Latrine and House washing station should be part of reconstruction and he requested POs to support reconstruction with integrated and collaborative approach.
- He also mentioned need of half day or full day **workshop** to understand and share every POs WASH strategy and to work out together to solve burring issues and challenges faced in district.
